

EnWave Signs Commercial Royalty-Bearing License With Bare Foods Co. for the Production of Healthy Snack Products

Vancouver, B.C., March 28th, 2017

EnWave Corporation (TSX-V:ENW | FSE:E4U) ("EnWave", or the "Company" - <http://www.commodity-tv.net/c/mid,1323,Interviews/?v=297291>) announced today that has signed a Commercial Royalty bearing License (the "License") with Bare Foods Co. ("Bare"), a leading American snack food company. Bare will submit a purchase order for EnWave to deliver a small commercial-scale Radiant Energy Vacuum ("REV™") machine for expected production to begin in late 2017.

About Bare Foods Co.

Bare Foods Co. creates deliciously simple snacks to keep consumers healthy and happy. Bare Foods is on a mission to create a snacking revolution, motivated by a founding philosophy of creating delicious snacks with simple ingredients and nothing artificial ever. Bare Foods believes that the less you add, the more you actually taste. Bare® products are available in the U.S. market in natural as national retailers such as Target and Amazon.

About EnWave

EnWave Corporation, a Vancouver-based advanced technology company, has developed Radiant Energy Vacuum ("REV™") – an innovative, proprietary method for the precise dehydration of organic materials. REV™ technology's commercial viability has been demonstrated and is growing rapidly across several market verticals in the food and pharmaceutical sectors. EnWave's strategy is to sign royalty-bearing commercial licenses with industry leaders in multiple verticals for the use of REV™ technology. The company has signed nineteen royalty-bearing licenses to date, opening up eight distinct market sectors for commercialization of new and innovative products. In addition to these licenses, EnWave has formed a Limited Liability Partnership, NutraDried LLP, to develop, manufacture, market and sell all-natural cheese snack products in the United States under the Moon Cheese® brand.

EnWave has introduced REV™ as the new dehydration standard in the food and biological material sectors: faster and cheaper than freeze drying, with better end product quality than air drying or spray drying. EnWave currently has three commercial REV™ platforms:

1. *nutraREV*® which is used in the food industry to dry food products quickly and at low-cost, while maintaining high levels of nutrition, taste, texture and colour;
2. *powderREV*® which is used for the bulk dehydration of food cultures, probiotics and fine biochemicals such as enzymes below the freezing point, and
3. *quantaREV*® which is used for continuous, high-volume low-temperature drying.

An additional platform, *freezeREV*®, is being developed as a new method to stabilize and dehydrate biopharmaceuticals such as vaccines and antibodies. More information about EnWave is available at www.enwave.net.
