

**EnWave Signs Equipment Purchase Agreement with  
NutraDried Food Company LLC for Second 100kW Radiant Energy Vacuum Machine; 10kW  
Machine also Sold to Expedite Product Development and Improve Production Capacity**

Vancouver, B.C., June 26<sup>th</sup>, 2018

**EnWave Corporation (TSX-V:ENW | FSE:E4U) ("EnWave", or the "Company" - [https://www.youtube.com/watch?v=AyKTfx\\_H0Tk&t=65s](https://www.youtube.com/watch?v=AyKTfx_H0Tk&t=65s))** announced today that its wholly-owned subsidiary, NutraDried Food Company LLC ("NutraDried"), is expanding its production capacity to facilitate the continued sales growth of Moon Cheese® based on projected demand.

NutraDried will acquire a second 100kW REV® machine and also a 10kW REV® machine to improve production capacity and expedite new product development. In particular, NutraDried's club-format Moon Cheese® sales has undergone tremendous growth across several geographic regions in North America and this has prompted the expansion to add the second 100kW REV® manufacturing line.

The 10kW REV® machine will provide increased capacity for product development and will enable NutraDried to create new, innovative flavors and develop additional product lines. Innovation will remain a driving force in NutraDried's business activities.

The purchase of the second 100kW REV™ line will be by way of a signed Equipment Purchase Agreement (the "EPA") with EnWave.

Moon Cheese® is currently available in four flavors (Mozzarella, Pepper Jack, Cheddar and Gouda) throughout over 25,000 points of distribution across the United States and Canada.

**About NutraDried Food Company LLC**

NutraDried Food Company LLC, based in Ferndale, Washington State, is a wholly-owned subsidiary of EnWave Corporation that is leveraging REV® technology to produce innovative snack food products. NutraDried was the first partner of the Company to take REV® dried snack cheese to market at commercial scale.

Operating primarily in the dairy vertical, NutraDried manufactures the clean label snack, Moon Cheese®. This 100% crunchy-cheese-snack product is sold across the United States through over 25,000 retail stores. For more information on NutraDried Food Company, please visit [www.mooncheese.com](http://www.mooncheese.com).

**About EnWave**

EnWave Corporation, a Vancouver-based advanced technology company, has developed Radiant Energy Vacuum ("REV™") – an innovative, proprietary method for the precise dehydration of organic materials. EnWave has further developed patent-pending methods for uniformly drying and decontaminating cannabis through the use of REV™ technology, shortening the time from harvest to marketable cannabis products.

REV™ technology's commercial viability has been demonstrated and is growing rapidly across several market verticals in the food, and pharmaceutical sectors including legal cannabis. EnWave's strategy is to

sign royalty-bearing commercial licenses with industry leaders in multiple verticals for the use of REV™ technology. The company has signed over twenty royalty-bearing licenses to date, opening up nine distinct market sectors for commercialization of new and innovative products. In addition to these licenses, EnWave has formed a Limited Liability Corporation, NutraDried Food Company, LLC, to develop, manufacture, market and sell all-natural cheese snack products in the United States under the Moon Cheese® brand.

EnWave has introduced REV™ as the new dehydration standard in the food and biological material sectors: faster and cheaper than freeze drying, with better end product quality than air drying or spray drying. EnWave currently has three commercial REV™ platforms:

1. *nutraREV*® which is used in the food industry to dry food products quickly and at low-cost, while maintaining high levels of nutrition, taste, texture and colour;
2. *powderREV*® which is used for the bulk dehydration of food cultures, probiotics and fine biochemicals such as enzymes below the freezing point, and
3. *quantaREV*® which is used for continuous, high-volume low-temperature drying.

An additional platform, *freezeREV*®, is being developed as a new method to stabilize and dehydrate biopharmaceuticals such as vaccines and antibodies. More information about EnWave is available at [www.enwave.net](http://www.enwave.net).
