

Silver Report 2018

Everything you need to know about silver!

Disclaimer

Dear reader,

Please read the complete disclaimer in the following pages carefully before you start reading this Swiss Resource Capital Publication. By using this Swiss Resource Capital Publication you agree that you have completely understood the following disclaimer and you agree completely with this disclaimer. If at least one of these point does not agree with you than reading and use of this publication is not allowed.

We point out the following:

Swiss Resource Capital AG and the authors of the Swiss Resource Capital AG directly own and/or indirectly own shares of following Companies which are described in this publication: Endeavour Silver Corp., First Majestic Silver Corp., Kootenay Silver Inc., Levon Resources Ltd., Metallic Minerals Corp., Sierra Minerals Inc., Silvercorp Metals Inc., Silver One Resources Inc.

Swiss Resource Capital AG has closed IR consultant contracts with the following companies which are mentioned in this publication: Endeavour Silver Corp., Sierra Metals Inc.

Swiss Resource Capital AG receives compensation expenses from the following companies mentioned in this publication: Endeavour Silver Corp., First Majestic Silver Corp., Kootenay Silver Inc., Levon Resources Ltd., Metallic Minerals Corp., Sierra Minerals Inc., Silvercorp Metals Inc., Silver One Resources Inc.. Therefore, all mentioned companies are sponsors of this publication.

Risk Disclosure and Liability

Swiss Resource Capital AG is not a securities service provider according to WpHG (Germany) and BörseG (Austria) as well as Art. 620 to 771 obligations law (Switzerland) and is not a finance company according to § 1 Abs. 3 Nr. 6 KWG. All publications of the Swiss Resource Capital AG are explicitly (including all the publications published on the website <http://www.resource-capital.ch> and all sub-websites (like <http://www.resource-capital.ch/de>) and the website <http://www.resource-capital.ch> itself and its sub-websites) neither financial analysis nor are they equal to a professional financial analysis. Instead, all publications of Swiss Resource Capital AG are exclusively for information purposes only and are expressively not trading recommendations regarding the buying or selling of securities. All publications of Swiss Resource Capital AG represent only the opinion of the respective author. They are

neither explicitly nor implicitly to be understood as guarantee of a particular price development of the mentioned financial instruments or as a trading invitation. Every investment in securities mentioned in publications of Swiss Resource Capital AG involve risks which could lead to total a loss of the invested capital and - depending on the investment – to further obligations for example additional payment liabilities. In general, purchase and sell orders should always be limited for your own protection.

This applies especially to all second-line-stocks in the small and micro cap sector and especially to exploration and resource companies which are discussed in the publications of Swiss Resource Capital AG and are exclusively suitable for speculative and risk aware investors. But it applies to all other securities as well. Every exchange participant trades at his own risk. The information in the publications of Swiss Resource Capital AG do not replace an on individual needs geared professional investment advice. In spite of careful research, neither the respective author nor Swiss Resource Capital AG will neither guarantee nor assume liability for actuality, correctness, mistakes, accuracy, completeness, adequacy or quality of the presented information. For pecuniary losses resulting from investments in securities for which information was available in all publications of Swiss Resource Capital AG liability will be assumed neither by Swiss Capital Resource AG nor by the respective author neither explicitly nor implicitly.

Any investment in securities involves risks. Political, economical or other changes can lead to significant stock price losses and in the worst case to a total loss of the invested capital and - depending on the investment – to further obligations for example additional payment liabilities. Especially investments in (foreign) second-line-stocks, in the small and micro cap sector, and especially in the exploration and resource companies are all, in general, associated with an outstandingly high risk. This market segment is characterized by a high volatility and harbours danger of a total loss of the invested capital and - depending on the investment – to further obligations for example additional payment liabilities. As well, small and micro caps are often very illiquid and every order should be strictly limited and, due to an often better pricing at the respective domestic exchange, should be traded there. An investment in securities with low liquidity and small market cap is extremely speculative as well as a high risk and can lead to, in the worst case, a total loss of the invested capital and - depending on the investment – to further obligations for example additional payment liabilities. Engagements in the publications of the shares and products presented in all publications of Swiss Resource Capital AG have in

part foreign exchange risks. The deposit portion of single shares of small and micro cap companies and low capitalized securities like derivatives and leveraged products should only be as high that, in case of a possible total loss, the deposit will only marginally lose in value.

All publications of Swiss Resource Capital AG are exclusively for information purposes only. All information and data in all publications of Swiss Resource Capital AG are obtained from sources which are deemed reliable and trustworthy by Swiss Resource Capital AG and the respective authors at the time of preparation. Swiss Resource Capital AG and all Swiss Resource Capital AG employed or engaged persons have worked for the preparation of all of the published contents with the greatest possible diligence to guarantee that the used and underlying data as well as facts are complete and accurate and the used estimates and made forecasts are realistic. Therefore, liability is categorically precluded for pecuniary losses which could potentially result from use of the information for one's own investment decision.

All information published in publications of Swiss Resource Capital AG reflects the opinion of the respective author or third parties at the time of reparation of the publication. Neither Swiss Resource Capital AG nor the respective authors can be held responsible for any resulting pecuniary losses. All information is subject to change. Swiss Resource Capital AG as well as the respective authors assures that only sources which are deemed reliable and trustworthy by Swiss Resource Capital AG and the respective authors at the time of preparation are used. Although the assessments and statements in all publications of Swiss Resource Capital AG were prepared with due diligence, neither Swiss Resource Capital AG nor the respective authors take any responsibility or liability for the actuality, correctness, mistakes, accuracy, completeness, adequacy or quality of the presented facts or for omissions or incorrect information. The same shall apply for all presentations, numbers, designs and assessments expressed in interviews and videos.

Swiss Resource Capital AG and the respective authors are not obliged to update information in publications. Swiss Resource Capital AG and the respective authors explicitly point out that changes in the used and underlying data, facts, as well as in the estimates could have an impact on the forecasted share price development or the overall estimate of the discussed security. The statements and opinions of Swiss Capital Resource AG as well as the respective author are not recommendations to buy or sell a security.

Neither by subscription nor by use of any publication of Swiss Resource Capital AG or

by expressed recommendations or reproduced opinions in such a publication will result in an investment advice contract or investment brokerage contract between Swiss Resource Capital AG or the respective author and the subscriber of this publication.

Investments in securities with low liquidity and small market cap are extremely speculative as well as a high risk. Due to the speculative nature of the presented companies their securities or other financial products it is quite possible that investments can lead to a capital reduction or to a total loss and - depending on the investment – to further obligations for example additional payment liabilities. Any investment in warrants, leveraged certificates or other financial products bears an extremely high risk. Due to political, economical or other changes significant stock price losses can arise and in the worst case a total loss of the invested capital and - depending on the investment – to further obligations for example additional payment liabilities. Any liability claim for foreign share recommendations, derivatives and fund recommendations are in principle ruled out by Swiss Resource Capital AG and the respective authors. Between the readers as well as the subscribers and the authors as well as Swiss Resource Capital AG no consultancy agreement is closed by subscription of a publication of Swiss Resource Capital AG because all information contained in such a publication refer to the respective company but not to the investment decision. Publications of Swiss Resource Capital AG are neither, direct or indirect an offer to buy or for the sale of the discussed security (securities), nor an invitation for the purchase or sale of securities in general. An investment decision regarding any security should not be based on any publication of Swiss Resource Capital AG.

Publications of Swiss Resource Capital AG must not, either in whole or in part be used as a base for a binding contract of all kinds or used as reliable in such a context. Swiss Resource Capital AG is not responsible for consequences especially losses, which arise or could arise by the use or the failure of the application of the views and conclusions in the publications. Swiss Resource Capital AG and the respective authors do not guarantee that the expected profits or mentioned share prices will be achieved.

The reader is strongly encouraged to examine all assertions him/herself. An investment, presented by Swiss Resource Capital AG and the respective authors in partly very speculative shares and financial products should not be made without reading the most current balance sheets as well as assets and liabilities reports of the companies at the Securities and Exchange Commission (SEC) under www.sec.gov or other regulatory authorities or carrying

out other company evaluations. Neither Swiss Resource Capital AG nor the respective authors will guarantee that the expected profits or mentioned share prices will be achieved. Neither Swiss Resource Capital AG nor the respective authors are professional investment or financial advisors. The reader should take advice (e. g. from the principle bank or a trusted advisor) before any investment decision. To reduce risk investors should largely diversify their investments.

In addition, Swiss Resource Capital AG welcomes and supports the journalistic principles of conduct and recommendations of the German press council for the economic and financial market reporting and within the scope of its responsibility will look out that these principles and recommendations are respected by employees, authors and editors.

Forward-looking Information

Information and statements in all publications of Swiss Resource Capital AG especially in (translated) press releases that are not historical facts are forward-looking information within the meaning of applicable securities laws. They contain risks and uncertainties but not limited to current expectations of the company concerned, the stock concerned or the respective security as well as intentions, plans and opinions. Forward-looking information can often contain words like “expect”, “believe”, “assume”, “goal”, “plan”, “objective”, “intent”, “estimate”, “can”, “should”, “may” and “will” or the negative forms of these expressions or similar words suggesting future events or expectations, ideas, plans, objectives, intentions or statements of future events or performances. Examples for forward-looking information in all publications of Swiss Resource Capital AG include: production guidelines, estimates of future/targeted production rates as well as plans and timing regarding further exploration, drill and development activities. This forward-looking information is based in part on assumption and factors that can change or turn out to be incorrect and therefore may cause actual results, performances or successes to differ materially from those stated or postulated in such forward-looking statements. Such factors and assumption include but are not limited to: failure of preparation of resource and reserve estimates, grade, ore recovery that differs from the estimates, the success of future exploration and drill programs, the reliability of the drill, sample and analytical data, the assumptions regarding the accuracy of the representativeness of the mineralization, the success of the planned metallurgical test work, the significant deviation of capital and operating costs from the estimates, failure to receive necessary government approval and environmental permits or other project per-

mits, changes of foreign exchange rates, fluctuations of commodity prices, delays by project developments and other factors.

Potential shareholders and prospective investors should be aware that these statements are subject to known and unknown risks, uncertainties and other factors that could cause actual events to differ materially from those indicated in the forward-looking statements. Such factors include but are not limited to the following: risks regarding the inaccuracy of the mineral reserve and mineral resource estimates, fluctuations of the gold price, risks and dangers in connection with mineral exploration, development and mining, risks regarding the creditworthiness or the financial situation of the supplier, the refineries and other parties that are doing business with the company; the insufficient insurance coverage or the failure to receive insurance coverage to cover these risks and dangers, the relationship with employees; relationships with and the demands from the local communities and the indigenous population; political risks; the availability and rising costs in connection with the mining contributions and workforce; the speculative nature of mineral exploration and development including risks of receiving and maintaining the necessary licences and permits, the decreasing quantities and grades of mineral reserves during mining; the global financial situation, current results of the current exploration activities, changes in the final results of the economic assessments and changes of the project parameter to include unexpected economic factors and other factors, risks of increased capital and operating costs, environmental, security and authority risks, expropriation, the tenure of the company to properties including their ownership, increase in competition in the mining industry for properties, equipment, qualified personal and its costs, risks regarding the uncertainty of the timing of events including the increase of the targeted production rates and fluctuations in foreign exchange rates. The shareholders are cautioned not to place undue reliance on forward-looking information. By its nature, forward-looking information involves numerous assumptions, inherent risks and uncertainties both general and specific that contribute to the possibility that the predictions, forecasts, projections and various future events will not occur. Neither Swiss Resource Capital AG nor the referred to company, referred to stock or referred to security undertake no obligation to update publicly otherwise revise any forward-looking information whether as a result of new information, future events or other such factors which affect this information, except as required by law.

48f Abs. 5 BörseG (Austria) and Art. 620 to 771 obligations law (Switzerland)

Swiss Resource Capital AG as well as the respective authors of all publications of Swiss Resource Capital AG could have been hired and compensated by the respective company or related third party for the preparation, the electronic distribution and publication of the respective publication and for other services. Therefore the possibility exists for a conflict of interests.

At any time Swiss Resource Capital AG as well as the respective authors of all publications of Swiss Resource Capital AG could hold long and short positions in the described securities and options, futures and other derivatives based on theses securities. Furthermore Swiss Resource Capital AG as well as the respective authors of all publications of Swiss Resource Capital AG reserve the right to buy or sell at any time presented securities and options, futures and other derivatives based on theses securities. Therefore the possibility exists for a conflict of interests.

Single statements to financial instruments made by publications of Swiss Resource Capital AG and the respective authors within the scope of the respective offered charts are not trading recommendations and are not equivalent to a financial analysis.

A disclosure of the security holdings of Swiss Resource Capital AG as well as the respective authors and/or compensations of Swiss Resource Capital AG as well as the respective authors by the company or third parties related to the respective publication will be properly declared in the publication or in the appendix.

The share prices of the discussed financial instruments in the respective publications are, if not clarified, the closing prices of the preceding trading day or more recent prices before the respective publication.

It cannot be ruled out that the interviews and estimates published in all publications of Swiss Resource Capital AG were commissioned and paid for by the respective company or related third parties. Swiss Resource Capital AG as well as the respective authors are receiving from the discussed companies and related third parties directly or indirectly expense allowances for the preparation and the electronic distribution of the publication as well as for other services.

Exploitation and distribution rights

Publications of Swiss Resource Capital AG may neither directly or indirectly be transmitted to Great Britain, Japan, USA or Canada or to an US citizen or a person with place of residence in the USA, Japan, Canada or Great

Britain nor brought or distributed in their territory. The publications and their contained information can only be distributed or published in such states where it is legal by applicable law. US citizens are subject to regulation S of the U.S. Securities Act of 1933 and cannot have access. In Great Britain the publications can only be accessible to a person who in terms of the Financial Services Act 1986 is authorized or exempt. If these restrictions are not respected this can be perceived as a violation against the respective state laws of the mentioned countries and possibly of non mentioned countries. Possible resulting legal and liability claims shall be incumbent upon that person, but not Swiss Resource Capital, who has published the publications of Swiss Resource Capital AG in the mentioned countries and regions or has made available the publications of Swiss Resource Capital AG to persons from these countries and regions.

The use of any publication of Swiss Resource Capital AG is intended for private use only. Swiss Resource Capital AG shall be notified in advance or asked for permission if the publications will be used professionally which will be charged.

All information from third parties especially the estimates provided by external user does not reflect the opinion of Swiss Resource Capital AG. Consequently, Swiss Resource Capital AG does not guarantee the actuality, correctness, mistakes, accuracy, completeness, adequacy or quality of the information.

Note to symmetrical information and opinion generation

Swiss Resource Capital AG can not rule out that other market letters, media or research companies are discussing concurrently the shares, companies and financial products which are presented in all publications of Swiss Resource Capital AG. This can lead to symmetrical information and opinion generation during that time period.

No guarantee for share price forecasts

In all critical diligence regarding the compilation and review of the sources used by Swiss Resource Capital AG like SEC Filings, official company news or interview statements of the respective management neither Swiss Resource Capital AG nor the respective authors can guarantee the correctness, accuracy and completeness of the facts presented in the sources. Neither Swiss Resource Capital AG nor the respective authors will guarantee or be liable for that all assumed share price and profit developments of the respective companies and financial products respectively in all publi-

cations of Swiss Resource Capital AG will be achieved.

No guarantee for share price data

No guarantee is given for the accuracy of charts and data to the commodity, currency and stock markets presented in all publications of Swiss Resource Capital AG.

Copyright

The copyrights of the single articles are with the respective author. Reprint and/or commercial dissemination and the entry in commercial databases is only permitted with the explicit approval of the respective author or Swiss Resource Capital AG.

All contents published by Swiss Resource Capital AG or under <http://www.resource-capital.ch> – website and relevant sub-websites or within <http://www.resource-capital.ch> – newsletters and by Swiss Resource Capital AG in other media (e.g. Twitter, Facebook, RSS-Feed) are subject to German, Austrian and Swiss copyright and ancillary copyright. Any use which is not approved by German, Austrian and Swiss copyright and ancillary copyright needs first the written consent of the provider or the respective rights owner. This applies especially for reproduction, processing, translation, saving, processing and reproduction of contents in databases or other electronic media or systems. Contents and rights of third parties are marked as such. The unauthorised reproduction or dissemination of single contents and complete pages is not permitted and punishable. Only copies and downloads for personal, private and non commercial use is permitted.

Links to the website of the provider are always welcome and don't need the approval from the website provider. The presentation of this website in external frames is permitted with authorization only. In case of an infringement regarding copyrights Swiss Resource Capital AG will initiate criminal procedure.

Notes from Bundesanstalt für Finanzdienstleistungsaufsicht (Federal Financial Supervisory Authority)

You will find in brochures of BaFin (see links) additional notes that should contribute to protect against dubious offers:
Investment – how to recognize dubious sellers:

Liability limitation for links

The <http://www.resource-capital.ch> – website and all sub-websites and the <http://www.resource-capital.ch> – newsletter and all publications of Swiss Resource Capital AG contain links to websites of third parties (“external links”). These websites are subject to liability of the respective operator. Swiss Resource Capital AG has reviewed the foreign contents at the initial linking with the external links if any statutory violations were present. At that time no statutory violations were evident. Swiss Resource capital AG has no influence on the current and future design and the contents of the linked websites. The placement of external links does not mean that Swiss Resource Capital AG takes ownership of the contents behind the reference or the link. A constant control of these links is not reasonable for Swiss Resource Capital AG without concrete indication of statutory violations. In case of known statutory violations such links will be immediately deleted from the websites of Swiss Resource Capital AG. If you encounter a website of which the content violates applicable law (in any manner) or the content (topics) insults or discriminates individuals or groups of individuals, please contact us immediately.

In its judgement of May 12th, 1998 the Landgericht (district court) Hamburg has ruled that by placing a link one is responsible for the contents of the linked websites. This can only be prevented by explicit dissociation of this content. For all links on the homepage <http://www.resource-capital.ch> and its sub-websites and in all publications of Swiss Resource Capital AG applies: Swiss Resource Capital AG is dissociating itself explicitly from all contents of all linked websites on <http://www.resource-capital.ch> – website and its sub-websites and in the <http://www.resource-capital.ch> – newsletter as well as all publications of Swiss Resource Capital AG and will not take ownership of these contents.”

Liability limitation for contents of this website

The contents of the website <http://www.resource-capital.ch> and its sub-websites are compiled with utmost diligence. Swiss Resource Capital AG however does not guarantee the accuracy, completeness and actuality of the provided contents. The use of the contents of website <http://www.resource-capital.ch> and its sub-websites is at the user's risk.

Specially marked articles reflect the opinion of the respective author but not always the opinion of Swiss Resource Capital AG.

Liability limitation for availability of website

Swiss Resource Capital AG will endeavour to offer the service as uninterrupted as possible. Even with due care downtimes can not be excluded. Swiss Resource Capital AG reserves the right to change or discontinue its service any time.

Liability limitation for advertisements

The respective author and the advertiser are exclusively responsible for the content of advertisements in <http://www.resource-capital.ch> – website and its sub-websites or in the <http://www.resource-capital.ch> – newsletter as well as in all publications of Swiss Resource Capital AG and also for the content of the advertised website and the advertised products and services. The presentation of the advertisement does not constitute the acceptance by Swiss Resource Capital AG.

No contractual relationship

Use of the website <http://www.resource-capital.ch> and its sub-websites and <http://www.resource-capital.ch> – newsletter as well as in all publications of Swiss Resource Capital AG no contractual relationship is entered between the user and Swiss Resource Capital AG. In this respect there are no contractual or quasi-contractual claims against Swiss Resource Capital AG.

Protection of personal data

The personalized data (e.g. mail address of contact) will only be used by Swiss Resource Capital AG or from the respective company for news and information transmission in general or used for the respective company.

Data protection

If within the internet there exists the possibility for entry of personal or business data (email addresses, names, addresses), this data will be disclosed only if the user explicitly volunteers. The use and payment for all offered services is permitted – if technical possible and reasonable – without disclosure of these data or by entry of anonymized data or pseudonyms. Swiss Resource Capital AG points out that the data transmission in the internet (e.g. communication by email) can have security

breaches. A complete data protection from unauthorized third party access is not possible. Accordingly no liability is assumed for the unintentional transmission of data. The use of contact data like postal addresses, telephone and fax numbers as well as email addresses published in the imprint or similar information by third parties for transmission of not explicitly requested information is not permitted. Legal action against the senders of spam mails are expressly reserved by infringement of this prohibition.

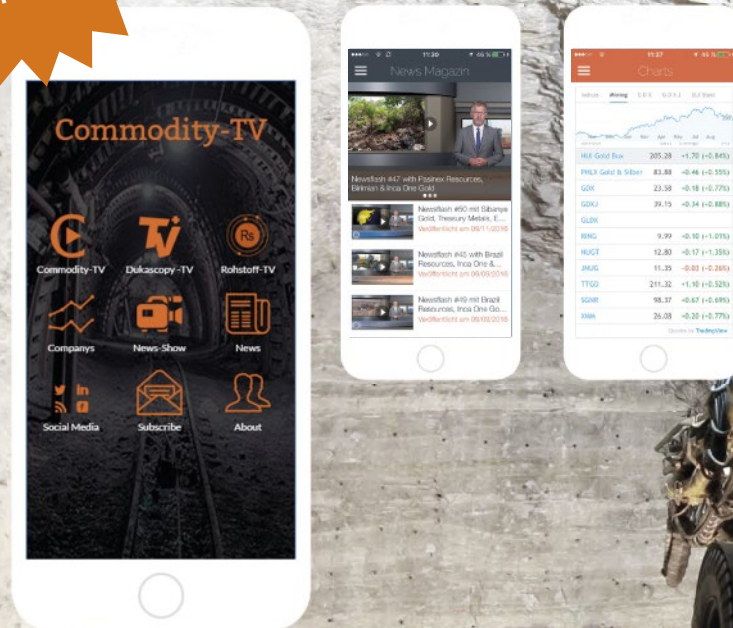

By registering in <http://www.resource-capital.ch> – website and its sub-websites or in the <http://www.resource-capital.ch> – newsletter you give us permission to contact you by email. Swiss Resource Capital AG receives and stores automatically via server logs information from your browser including cookie information, IP address and the accessed websites. Reading and accepting our terms of use and privacy statement are a prerequisite for permission to read, use and interact with our website(s).

**Commodity-TV and Rohstoff-TV get
your company the awareness it deserves!**

Preface

Dear reader,

on the following pages we present to you with great pleasure our special report on the topic "Silver", which follows our successful Lithium and Uranium Reports. Swiss Resource Capital AG has made it its business to topically and comprehensively inform commodity investors, interested parties and the individual who wants to become an investor in various commodities and mining companies. On our website www.resource-capital.ch you will find 20 companies and information as well as articles related to commodities. We see silver as an industrial metal on one side and as indispensable for the solar industry as well as a high-tech metal on the other side. Silver reached a supply deficit in 2016 and will continue to do so which allows for space and opportunities for future price development. Silver is becoming more and more important for antibacterial applications, allergy sufferers, textiles, cosmetics, high-tech industry, energy transmission, solar industry and for electric vehicles as well. The demand is rising whereby the supply cannot keep up due to the fact that silver is in large part a by-product of the base metal production. One should also keep in mind the value of silver as a store of purchasing power and pecuniary substitute as well as a hedge against extremely bad times. If the global financial systems can't withstand the money printing orgies of the central banks and financial collapse occurs, then the owner of silver ounces has a clear advantage to provide himself and his family with the most necessary food. We don't want to conjecture the worst case but physical silver and also gold as well as my wine cellar ease off my fear of the potential coming distortions. It is more important to have a positive view of the future and that nice returns can be achieved with silver companies. Once silver turns north the silver producers have a tremendous leverage

on the silver price and are well suited as an investment. In this silver report some interesting companies are presented which are suited for speculation on rising silver prices. Via the general overview we also want to provide you with the necessary basic knowledge so that you can make your own decisions.

With our special reports we would like to give you the necessary insights and inform you comprehensively. In addition, our two Commodity IP-TV channels www.Commodity-TV.net & www.Rohstoff-TV.net are always available to you free of charge. For the go we recommend our new Commodity-TV App for iPhone and Android which also provides real-time charts, share prices and the latest videos.

My team and I hope you will enjoy reading the special report on silver and hope that we can provide you with new information, impressions and ideas. Only the one who gets broadly informed and takes matters relating to investments in his own hand will be amongst the winners and preserve his wealth during these difficult times. Silver like gold withstood over millennia and will continue to withstand in the future.

Yours Jochen Staiger

Jochen Staiger is founder and CEO of Swiss Resource Capital AG, located in Herisau, Switzerland. As chief-editor and founder of the first two resource IPTV-channels Commodity-TV and its German counterpart Rohstoff-TV, he reports about companies, experts, fund managers and various themes around the international mining business and the correspondent metals.

Tim Roedel is chief-editorial- and -communications-manager at SRC AG. He has been active in the commodity sector since 2007 and held several editor- and chief-editor-positions, e.g. at the publications Rohstoff-Spiegel, Rohstoff-Woche, Rohstoffraketen, Wahrer Wohlstand and First Mover. He owns an enormous commodity expertise and a wide-spread network within the whole resource sector.

Silver – considerable catch-up potential via growing mechanization and investment demand!

What is better than gold? – Correct: Silver! At least if we look at some fundamental data such as the ratio of gold production to silver production together with the ratio of the gold price to silver price or the grade of industrial use of both metals. Then, one quickly finds out that compared to gold, silver has a tremendous catch-up potential.

In regard to gold silver has a multiple catch-up potential

The reason that silver has additional catch-up potential with respect to gold is on the one hand the historic gold/silver ratio and on the other the ratio of produced ounces of gold/produced ounces of silver.

The ratio between the gold price and the silver price was – as long as both metals were a currency in the USA and Europe (gold and silver backed currencies were amongst others the US\$, the Goldmark or the Pound Sterling (Silver)) – always at 16:1. At the moment the price difference between gold and silver is approximately at 75:1!

The number of ounces of silver to the number of ounces of gold in the earth's crust is approximately 16:1 (other sources mention 20:1, which is not such a big difference). The same ratio is found for the annual silver and gold production, 16:1. That was always so and this is

the reason for the historic price ratio between gold and silver of 16:1.

Gold = Silver times 16 – but not for the price

A summary of these findings provides the insight that something is not right. The ratio of existing and annually produced ounces of silver to gold is approximately 16:1. Concurrently the price difference of an ounce of gold to an ounce of silver is 75:1. If this doesn't sound right and should shift in favor of silver towards 16:1 one is really amazed about the aforementioned ratio of investments in physical silver to investments in physical gold which according to leading national Mints is between 1 and 2.5. How is this possible that (almost) as much capital flows in to physical silver than in physical gold? The ratio of physical silver to physical gold is around 16:1 and the price of an ounce of gold to an ounce of silver is 75:1.

The paper silver determines the price

This is prevented by the “paper exchange” Comex. On Comex, contracts for all sorts of metals and other commodities are traded since ever. In theory there is the obligation for a physical delivery which is never called for. Thereby it is possible to trade more than a billion ounces silver daily (2016 the global silver production amounted to “only” 886 million ounces silver per year), even if this incredible amount of silver is not owned by anyone. With actions like this the silver price can be artificially depressed.

Gold and silver have already become a substitute currency

On the other side the by debt crisis and geopolitical distortion shaken markets

have already made gold a kind of substitute currency. That this is so shows gold's rise by 700 % during the first decade of the 21st century and the big gold outflow from Europe to China that increased during recent years. If gold would be made to a currency the same would be happening to silver and the amount of gold and silver necessary to build such a gold and silver backed currency system would be several times higher than the dwindling industrial demand caused by possible crises.

Silver has to detach itself from gold in the long-term!

As an interim conclusion it can be said that the old price ratio of 16 ounces of silver to one ounce of gold could be a suitable basis. Based on current facts silver must return to its old strength and thereby also to the old price ratio of 1:16! It can be noted that for the last 3, 5 and 10 years the price development of silver and gold was parallel to 80%. This doesn't say anything about the volatility: The beta of silver to gold was between 1.2 and 1.4 during this time. This means that at an increase in price of gold by 10% an increase in price of silver by 12-14% is very likely. As can be seen, silver is a riskier but also potentially a more promising investment.

What is silver?

Top characteristics make silver an indispensable industrial metal!

Let us come to the element silver itself and the actual market activities. Silver is a chemical element with the element symbol Ag and the atomic number 47. It ranks among the so-called transition metals. Silver is a soft, ductile heavy metal with the highest electrical conduc-

tivity of all elements and the highest thermal conductivity of all metals. These characteristics make silver an indispensable metal for industrial applications.

But silver is much more: Unlike gold, it is used in numerous applications that are steadily increasing with technical progress. Besides its use as industrial metal, silver is also a precious metal. Like gold, silver is in principle money and is used for value preservation. It can also be viewed as a hedge against a progressing inflation.

Supply Situation

Mexico, Peru and China are the leading producers

In 2015 the global silver production reached its previous peak with a total of 891 million mined ounces. In 2016, approximately 886 million ounces (close to 27,580 tons) were extracted from the earth's crust, minus 0.6% combined with 2015. With an annual production of 180 million ounces (approximately 20% of the total global production) Mexico ranks first among the silver producing nations followed by Peru and China. These three countries are accountable for about half of the global silver production.

In 2015 the global silver production reached its previous peak.

Only 30% of the annual production is mined in pure silver mines
Source: The Silver Institute, DB, GS, Tiberius

Silver is above all one thing: a by-product!

Only 30% of the annual production is mined in pure silver mines respectively in mines where silver is the primary resource. The predominant part (70%) originates from mines where silver is only a by-product thus mainly from zinc-lead mines and also from copper mines as well as gold mines.

Weak base metal prices lead to stagnant silver production and to a falling supply overall

This great dependency on base metals like lead, zinc and copper is a factor that the weak base metal prices and related mine closures or at least the decrease of the respective base metal production adversely affects the production of the by-product silver. That the price declined in the past years – above all of copper and lead too – is a reason that the silver production increased only marginally. From 2014 to 2015 the silver production increased by 2% only! The decline in silver recycling by 13% to 22.2 million ounces was responsible for the slight decline in total supply between 2014 and 2015. A continuation of the stagnant silver production during the coming years is predicted because the output of the new mines can barely compensate the short-

fall of the zinc/lead mines. From today's view a declining silver production as well as a decline of the overall silver supply is expected as of 2019. The main reason is the expected closure of several medium to large size zinc/lead mines and as well as the tremendous investment backlog which has built up due to the weak silver price during recent years. Respective silver projects were shelved and inadequately developed. As a consequence, these projects will be brought to production with a big delay.

Silver companies prioritize(d) cost savings

The development of the mine pipeline came to a halt in the past years with weak silver prices because the silver companies primarily had to deal with controlling their cost structure. The high silver prices between 2010 and 2012 led to the commissioning of mines with all-in costs of over US\$ 20 per ounce. These mines quickly became uneconomical after 2012. Instead of closing these mines the companies tried and are still trying to reduce costs. So, there is not much time and a lot less money for extensive exploration and development programs. In the meantime, most of the companies have reduced their costs to an acceptable and largely profitable level.

Recycling and central bank sales may not increase the supply

A further decline in supply is still expected for the silver recycling sector. Sales from the central banks are no issue since 2011 and may not contribute to a significant rise of the silver supply in coming years.

Demand situation

Silver in a dual role

Whereas gold is used as an investment to preserve value in form of jewelry (only 9% of the annual demand comes from industry), silver has a dual role. Approximately 60% of the total silver demand comes from the industry. The rest is in demand by investors in form of bullion and coins as well as the jewelry industry.

Main areas of application: Electronic, Alloys, Photography, Photovoltaic

The maximum values of the important properties (highest electrical conductivity of all metals, high thermal conductivity and distinct optical reflecting capacity) make silver indispensable in the areas of electrics, electronics and optic as well as photography. About half of the total industrial demand of around 600 million ounces comes from these areas. Other applications are in silver alloys (with copper, zinc, tin, nickel, indium) which are used in the electro-technics and soldering technique as solder alloys (so-called brazing), in contact materials (primarily in relays) and conductive materials (as capacitor coatings). Since 2011 the photovoltaic sector is a significant part of the silver demand. Especially China wants to expand its photovoltaic capacity to around 110 gigawatts by 2020. This would fix a lot more silver for at least 20 years!

Physical demand reaches record high and is driven primarily by the investment sector

The physical silver demand reached a record high of around 1.17 billion ounces (36,400 tons) in 2015 and fell from a very

World Silver Supply
Source: The Silver Institute, GFMS, Thomson Reuters

high level to 1.03 billion ounces in 2016. The main reason for this was a decreasing demand from the investment sector. The demand for coins and bullion decreased by 29% after it has increased by 24% one year before.

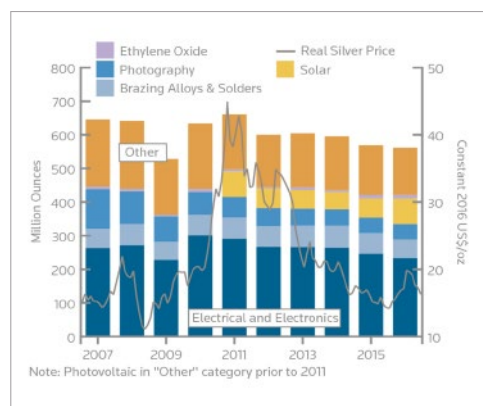

Silver ETFs record cash inflow again

The worldwide ETF inventories climbed, since the beginning of 2016 intermittently by 13% to an all-time high of around 676 million ounces. The main reason is certainly the expansive politics of the FED and other Central Banks that not only pump unsecured billion-dollar as-

World Silver Demand

Worldwide industrial demand
Source: The Silver Institute, GFMS,
Thomson Reuters

sets in the markets but are also responsible for the sliding of interest rates into negative territory. While it costs interests in certain investment categories to invest money, no penalty interest has to be paid for physical silver. That special characteristic of silver (and gold) as a hard-financial asset should continue so that the physical demand from the investment sector should continue to remain on a stable high level.

Worldwide physical demand
for coins and bullion
Source: The Silver Institute, GFMS,
Thomson Reuters

Most recently it is noticeable on the investment side that the same amounts of money are spent to buy silver than for the acquisition of gold. A simple example: The US Mint sold for every dollar spent on gold, a dollar of silver. The Australian Mint sold for every dollar spent on gold 0.75 dollar of silver. At the Austrian Mint the ratio was around 2.5:1, at which sil-

ver (primarily in form of the one-ounce Philharmonic Coin) could catch up formidably. While the big gold ETFs had a high outflow the respective silver ETFs could in part increase their assets. It seems that silver investors had more confidence in their investment than gold investors in recent years although in the meantime the silver price dropped more from its highest level than the gold price.

Demand continues to increase

All in all, the global silver demand should continue to increase in the coming years. Besides the increasing ETF inflows and additional physical demand, an in part drastic demand increase is expected from the jewelry industry in Asia as well from several industry sectors such as photovoltaic, touch screens and displays. In addition, India is heading for another record year of silver imports.

Conclusion

The silver market is heading towards an ever-increasing supply deficit!

Since several years a proper supply deficit is prevailing in the silver sector which has reached its previous peak of more than 100 million ounces in 2015. Since 2000, there were only four years when the global silver producers generated a surplus. During the past years the demand was 350 million ounces higher than the production. The main reason for the drastic increase of the silver supply deficit is the conservative development activity of many precious metals companies in the past years. During the past three years no bonanza discovery was made and the exploration activities of most of the companies were completely

SILVER PHYSICAL SURPLUS / DEFICIT

Source: The Silver Institute, GFMS, Thomson
Reuters

stopped due to the low silver prices. Leading analysts expect a record supply deficit of more than 180 million ounces of silver in 2017!

Financial analysts forecast a silver price of up to US\$ 30 per ounce in 2018

The median forecast of 30 financial analysts predicts a silver price of almost US\$20 between 2018 and 2020 which is not far from the current silver price. Alone for 2018 the estimates range from bearish US\$15 to bullish US\$30. Should the expansionary monetary policy of the global central banks continue and more money without significant counter value is pumped into the dilapidated global financial system, the precious metals could also be among the winners in the coming years. That the silver price has a significant catch-up potential in comparison with gold, which is the result of the historic price development and the physical occurrence in the earth's crust, was plausibly explained.

Price control on the supply side and a rising dependency on new technologies will be the key to the next silver boom!

The primary objective for all who want to make money with silver - regardless if they are producers or investors - has to be the breakup of the current market power of the silver-paper-trade. If the silver producers and the leading commodity experts have their say, the physical silver market must and will dominate the paper-silver-market in the future. An increasing demand from the investor sector as well as from emerging nations like China, India and Brazil could contribute to that. A certain price control on the supply side would be more important. The formation of a silver cartel could be an important step toward a permanent silver price stabilization and following that toward a reasonable price ratio of 1:16 to gold. Should this be successful we could be at the beginning of a boom decade for silver. Fact is: the more humanity becomes dependent on the new technologies the more we become dependent on silver. And that will benefit the price of silver.

Interview with Dr. Torsten Dennin – Founder and CEO of Lynkeus Capital LLC

Dr. Torsten Dennin is the founder and CEO of Lynkeus Capital LLC, an investment boutique specialized on the topic area commodities, seated in Switzerland. Since 2003 Dr. Dennin is analyzing the international commodity markets with a focus on energy and the global equity sectors oil & gas and metals & mining. Until the middle of 2017 Dr. Dennin managed the division Strategy and Research of Tiberius Asset Management AG. Previously Dr. Dennin worked as Co-Head Natural Resources for VCH Vermögensverwaltung (asset management) (2010-2013) and from 2003 to 2010 as Portfolio Manager for Deutsche Bank AG in Frankfurt am Main. During this time, he was responsible for the investment decisions of several commodity funds. Dr. Dennin studied economics at the University in Cologne, Germany and at Pennsylvania State University, USA. He wrote his doctorate on the topic Commodity Markets at the Schumpeter School of Business and Economics. He is a full member of the Berlin Institute of Finance, Investigation and Digitalization. Dr. Dennin is the author of the books "Besicherte Rohstoffterminkontrakte im Asset Management", "Lukrative Rohstoffmärkte – Ein Blick hinter die Kulissen" and "Afrika – Kontinent der Chancen" as well as numerous publications in journals.

Dr. Dennin you are the founder and CEO of Lynkeus Capital LLC, an investment boutique, specialized in the topic commodity markets. As the commodity markets – measured against Bloomberg Commodity Index – have lost 3.3% you were able to achieve an increase of value of 48.2% with the Lynkeus Commodity Strategy in 2017. What are you doing differently from the competition? Which strategy or which investment goal are you pursuing specifically?

The Lynkeus Commodity Strategy is the product of my professional experience accumulated in the commodity markets during the past 15 years. Two features of the investment strategy stand out especially: first the Absolute Return Approach which allows long as well as short positions and second the Cross Asset Class Approach. This allows displaying an investment thesis in the commodity sector about the commodity as well as the stocks or bonds of commodity producers. Depending on what pays off more for the investors.

For example: in a positive market environment for gold and silver the shares of gold and silver mines often show a clearly more positive investment result because increasing prices are often reflected as a "multiplier" in the earnings and value of the company. So, for example, in the portfolio many stocks and debentures of gold and silver mines are found in addition to direct investments in gold and silver. For the selection the strategy relies on a stringent quantitative investment process and the qualitative fundamental market analysis for the suitable commodities.

Granted: an impressive investment result against the background of a weak development of the commodity market. But, what are the risks?

The Lynkeus Commodity Strategy is invested in the commodity markets since March 2016 but exists on paper since June 2013. During that period of more than 4 years an average growth of more than 32% per year was achieved (CAGR). Such a result can't be achieved with a "savings mentality" – that goes without saying. The specifications for the risk management provide for a strict control of the risk in proportion to the expected return. This means that the known risk measures like Sharpe Ratio, Sortino Ratio and Calmar Ratio have a value >1.

The bottom line of the past months is: it is possible to make money in the commodity markets!

What were the big value drivers in the commodity market during the past 12 months?

Quite clear: 2017 is a year for commodities and mines! After a sluggish recovery from the lows in January 2016 (+16%) the commodity markets are stagnant at the moment. During 2017 the prices of industrial metals, like aluminum, copper and zinc increased (+16.6% on average) and of the precious metals increased by 9.2% in average. Despite around US\$50 for a barrel of WTI crude oil the energy sector is in the red (-10.7%). And agricultural goods (-9.3%), unpopular with investors, did not bring joy.

That is especially annoying for the investor because of the loose Central Bank policy and a still low interest level, even an anemic economic growth and the absence of the collapse of the Euro Zone is sufficient to drive the stock markets to ever increasing record heights. The Dow Jones Industrial Average at 22,000 points and the S&P 500 index at 2,500 points have spoiled the investors. But the warnings are becoming louder and the air thinner.

After top performer status in 2016, silver and silver mines had major losses, especially in September 2017. What now?

Gold at almost US\$ 1,300 and silver below US\$ 17 per ounce doesn't sound interesting for the investors and is no feast for the eyes of the managers of gold and silver mines. During the past 12 months, the price of silver decreased by 13.3% and the shares of gold and silver mines – measured against the Philadelphia Gold & Silver Index – were traded 11% lower than a year ago.

Although the price of silver took several runs up to the US\$ 20 mark, the metal gave back all its gains. The positive news is that the current price of gold and silver is an invitation for additional purchases. The fundamental picture for precious metals remains unchanged and is still attractive. The reason is the general condition of the global economic and financial system, the historic low interest rates and the comparatively high valuation of the stock and bond markets. An upward movement of the inflation rate could inspire the gold and silver stocks.

Looking back on the past 5 years gold and silver mines as well as the commodity sector in general have just begun to catch up in comparison with the stock market.

There is a supply deficit for silver since several years. Meaning, less silver is produced per year than demanded. How do you explain the negative price development until the beginning of 2017?

On the one hand, it can be explained by the existing inventory and a weak investment demand. A slightly declining mine production also faced a declining investment demand since 2013/2014. In February 2016, the known silver ETF inventory declined to below 600 million ounces for the first time since 2012. Since then the ETF inventory was constantly rebuild and

reached a value of more than US\$ 11 billion in July 2017. On the other hand, silver was trapped in its "dual role" as a precious metal necessary for the industry. Around 60% of the silver demand is from the industry followed by coins, bullion and jewelry. And during the past quarters the economic development was noticeably weaker as the long-term trend.

In terms of price silver is roughly in accord with the development of the price of its "big brother" gold. It seems that silver is always a bit more volatile than gold, which in a figurative sense can be compared with a master walking his dog. While the master (gold) stays on the sidewalk the dog (silver) pulls in all directions. Why is silver far more volatile than gold?

The physical silver market is considerably smaller and thereby more susceptible to fluctuations. In a figurative sense, we compare the DAX with the SDAX. It can be noted that for the last 3, 5 and 10 years the price development of silver and gold was parallel to 80%. This doesn't mention anything about the volatility: The beta of silver to gold was between 1.2 and 1.4 during this time. This means that at an increase in price of gold by 10% an increase in price of silver by 12-14% is very likely. As can be seen, silver is a riskier but also a potentially more promising investment.

What is important for you in your assessment of a silver or precious metal company?

The location, quality, and the potential of an asset as well as the competence and reliability of the management are the decisive factors for our qualitative fundamental analysis. That applies for precious metals as well as for the mining and energy

Lynkeus Capital LLC

Founded at the beginning of 2016 Lynkeus Capital LLC has specialized in investments reaching across asset classes in the topic area of international commodity markets focusing on energy and metals. The focus is on the identification of extraordinary investment opportunities in commodities and commodity producers (shares and bonds) as well as achieving of a convincing, positive capital growth in any market phase ("Absolute Return"). Lynkeus is a member of the association for quality assurance of financial services (Verein zur Qualitätssicherung von Finanzdienstleistungen, VQF), a self-regulatory organization and industry organization for portfolio managers domiciled in Zug, Switzerland, recognized by FINMA (Swiss Financial Market Supervisory Authority).

sector. Prior to analysis all companies are subject to a quantitative screening. Diversification is another important aspect the investors should not neglect.

Besides your main activity at Lynkeus Capital LLC you are also an author of books. To date you have published the two books “Afrika – Kontinent der Chancen” and “Lukrative Rohstoffmärkte – Ein Blick hinter die Kulissen”. What are the reasons for writing the two books and what are your favorites on the African Continent?

Both books are clearly focused on the commodity markets and are recommended to interested investors. My first book gives background information on the big speculative bubbles at the commodity markets from the tulip craze in Holland during the 17th century over the silver speculation of the Hunt Brothers until the ruin of the Amaranth Advisors 10 years ago. In “Afrika – Kontinent der Chancen” I show the attractive development opportunities of commodity projects, among other things, gold, silver and gem stones.

The main silver mining countries are Mexico, Peru and, since a few years, China. Are there some true exotic places, meaning some regions in the world where silver is produced since recently or the commodity silver had only a niche role, but bigger amounts can be expected in the future?

With a production of 180 million ounces Mexico (20%) is the biggest producer followed by Peru and China. Around half of the global silver production comes from these countries combined. The biggest mine with an annual production of 20-22 million ounces is Penasquito in Mexico. Currently the focus of the markets is not the production increase but the production reduction by base metal mine closures. In addition, many companies are fa-

ced with their own problems. An example is the temporary suspension of the mining license for the Escobal Mine in Guatemala which has hit hard Tahoe Resources.

How do you see the future development of the silver price? Geopolitical uncertainties or currency crises have an effect on the price development of gold. Is this the case for silver too?

The Trump rally and the euphoria of cheap money sidelined gold and silver in the second half of 2017. Risk is in demand again! In other words: the asset protection with precious metals was not such a bargain since a long time – many risks are ignored by the capital market. The volatility of the stock markets is at a record low. Due to the attractive fundamental data and the low price I expect gold and silver to begin to catch up during the last quarter of 2017. This holds true especially due to the price correction of the precious metals in September.

Furthermore, what makes silver interesting is: Only 30% of the annual production comes from primary silver mines. Silver is predominantly a by-product in especially zinc/lead mines followed by copper and gold mines. The demand development is slightly positive in total while the future silver production is stagnant. Even towards gold, silver is currently “cheap”. A gold/silver ratio of more than 75 is evidence of the activity of the white metal towards its big brother. A “normalization” of the price ratio of gold and silver to a ratio of 60-65 implies an outperformance of silver to gold of almost 20%. This can be described as “brilliant” prospects!

Endeavour Silver

Three mining projects in production and three new projects in the pipeline within three years!

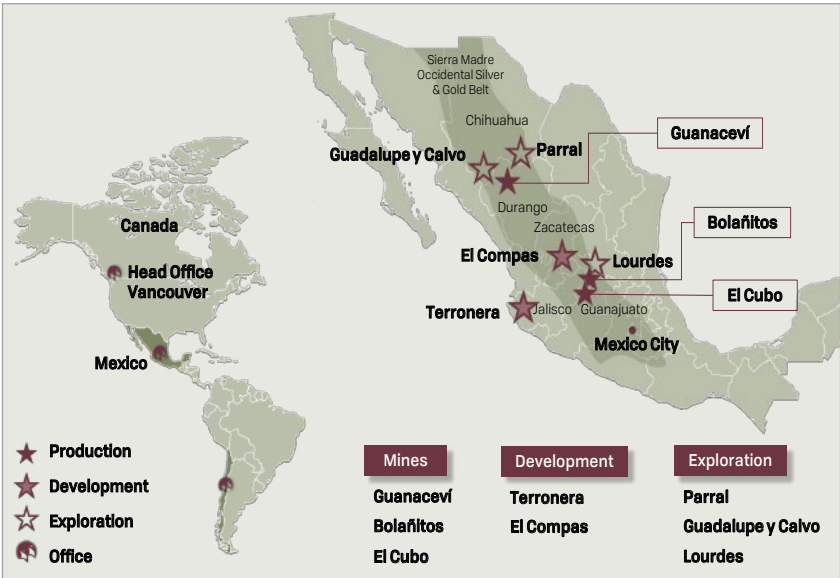

Endeavour Silver is one of the biggest silver producers in North America with listings in New York, Toronto and Frankfurt. During 2016, the company produced a total of 5.4 million ounces of silver and 57,375 ounces of gold in its three Mexican mines. Endeavour Silver is in the middle of a profound transformation by bringing three new mines to production until the end of 2019.

Guanacevi Silver Mine

Endeavour Silver's first mine, acquired in 2004, is comprised of the three operations Porvenir Norte, Porvenir Cuatro and Santa Cruz. Guanacevi has a processing capacity of 1,200 tons ore per day (tpd) which was only partly (898 tpd) utilized during the first half of 2017. At Guanacevi Endeavour Silver produced 999,424 ounces of silver and 2,271 ounces of gold during H1 2017. As of the end of 2016 Guanacevi contained reserves of 5.86 million ounces of silver equivalent and resources of 35.22 million ounces of silver equivalent. A further increase of the reserves and resources is possible as demonstrated by the new discoveries

(Source: Endeavor Silver)

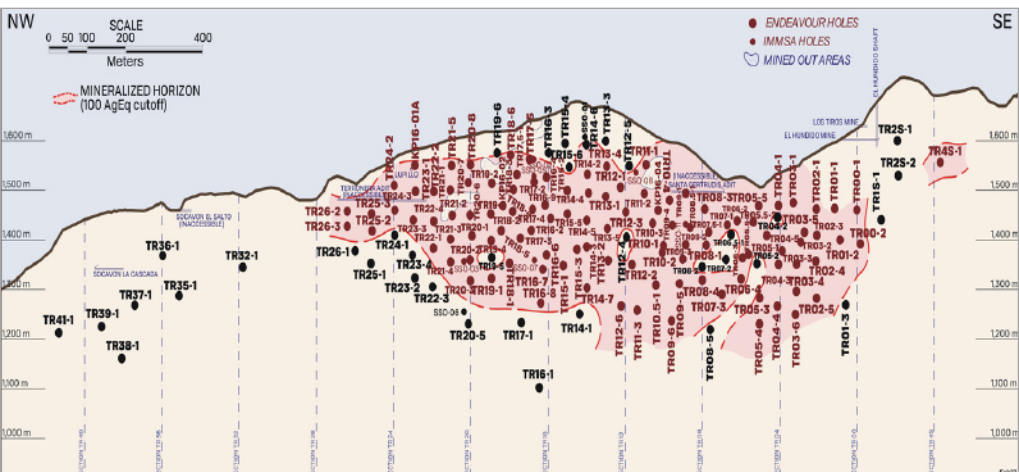

Milache and Santa Cruz Sur. The company could prove grades of up to 5,120 grams per ton silver equivalent in the area of the Santa Cruz Vein. In August 2017 the company reported several high-grade sections of 1,000 grams of silver equivalent per ton of rock including a section with 2,824 grams!

Bolañitos Silver Mine

In 2007 Endeavour Silver put Bolañitos into operation. Bolañitos is comprised of six mines: Lucero, Bolañitos, Karina, Fernanda, Daniela and Lana. Bolañitos has a processing capacity of 1,600 tpd which was utilized by two-third (1,150 tpd) during H1 2017. At Bolañitos Endeavour Silver produced 399,739 ounces of silver and 13,183 ounces of gold during H1 2017. As of the end of 2016 Bolañitos contained reserves of 3.36 million ounces of silver equivalent and resources of 20.01 million ounces of silver equivalent. The company is working to increase the reserves and resources and was successful with the new discoveries LL-Asuncion and La Joya.

El Cubo Silver Mine

El Cubo was acquired in 2012 and is comprised of the four producing mines San Nicholas, Dolores, Villalpando and Peregrina. El Cubo has a processing capacity of 1,500 tpd which was utilized well (1,306 tpd) during H1 2017. At El Cubo Endeavour Silver produced 821,599 ounces of silver and 9,328 ounces of gold during H1 2017. As of the end of 2016 El Cubo contained reserves of 8.17 million ounces of silver equivalent and resources of 31.54 million ounces of silver equivalent. At El Cubo Endeavour Silver reported a new discovery, V-Asuncion. In 2015 the mining capacity was increased to 2,200 tpd.

El Compas Mining Project

In May 2016 Endeavour Silver acquired the El Compas mining project for only US\$ 6.7 million in shares. Besides the acquisition of the gold-silver mining operation El Compas the company leased the nearby 500 tpd ore processing plant La Plata. The gold-silver mining project has good exploration potential to expand the resources and good acquisition potential to consolidate stranded resources and exploration targets within the Zacatecas mining district to extend mine life. El Compas is comprised of the El Compas and El Orito veins that can be mined quickly. In addition, the project area hosts 10 exploration targets. Previous drilling discovered, among other things, 239.55 gpt gold and 1,333 gpt silver over 4.7 m. In March 2017, the company was able to announce its first own resource estimate for El Compas. According to this, El Compas owns 6 million ounces of silver. Endeavour plans to bring the mine to production in early 2018. A Preliminary Economic Assessment (PEA) published in March 2017 estimated a very strong IRR (Internal Rate of Return) of 42% and a payback period of 2.1 years at the price of silver of US\$18 and the price of gold of US\$1,260. The All-in-sustaining costs are estimated to be US\$9.64 per Ag Eq oz.

To extend the mine life Endeavour Silver acquired two additional projects totaling 227 hectares in the vicinity of the planned El Compas mine in June 2017. These projects host several veins with proven grades of up to 1,300 g/t silver.

Terronera mega development project

At the San Sebastian project which was acquired in 2010, Endeavour Silver discovered a new high-grade silver-gold mineralization named Terronera which gave the project its name. The project hosts at least four large gold vein systems that in each case have a length of over 3 km. In total Terronera contains more than 58 million ounces of silver equivalent. Follow-up infill drilling identified up to 18,000 gpt silver equivalent. In the first half of 2016 alone Endeavour Silver discovered nine new veins. Terronera seems predestined to become Endeavour Silver's fifth producing mine (besides the three existing mines plus El Compas). First the project has the largest resources of all (mining) projects and second a less costly open pit mining operation would be theoretically possible due to its location. But such an operation would involve a lengthy approval phase and due to the

In total Terronera contains more than 58 million ounces of silver equivalent.
(Source: Endeavor Silver)

high grades, an underground operation seems to be more reasonable. Endeavour Silver already has a mining permit for Terronera.

In April 2017 Endeavour Silver published a Pre-Feasibility Study ("PFS") for its Terronera mine project. The study is based on an initial production rate of 1,000 tpd during the first two years of operations, and expanding to 2,000 tpd in the third year. Initial capital expenditures are estimated to be US\$69.2 million. The planned expansion is an additional estimated US\$ 35.5 million. It is expected that the mine will produce on average 5.1 million ounces of silver equivalents per year during the initial seven years of operation. An IRR of solid 21% was calculated based on the price of silver of US\$18 and the price of gold of US\$1,260. The construction time for the mine would be 12 to 16 months.

The quick mine construction within 12 to 16 months can be realized because Endeavour Silver has its own construction and planning team so that a production of up to 1,000 tpd can be realized fast. The team is comprised of the same project manager, same Canadian engineering consultants and the same Mexican construction company that has been used since 2010 for the expansion of Bolañitos and the commissioning of El Cubo.

In August 2017 Endeavour Silver reported additional results from its recent drill program in the La Luz Vein area. The company discovered sensational high-grade areas like 1,180 grams of silver equivalent per ton of rock over 1.7m, 1,485 grams of silver equivalent per ton of rock over 1.3m and 3,335 grams of silver equivalent per ton of rock over 0.2m. The highest concentration assayed incredible 11,245 grams of silver equivalent per ton of rock!

Parral development project

In September 2016 Endeavour Silver acquired the Parral project for only US\$6 million in Endeavour shares. The project hosts three large veins which are traceable over 8 km and are up to 40 m wide. The project contains a historic resource of 4.0 million tons grading 248.5 gpt silver for 32.1 million ounces of silver. In addition, there is an excellent potential to discover new high-grade resources in under-explored areas along strike of Veta Colorado, San Patricio, Palmilla and numerous other veins on the properties. Drill hole SPD-03 at San Patricio intersected 638 gpt silver over one meter. Endeavour Silver is counting on positive synergies with the existing Parral project that hosts indicated resources of 1.63 million tons grading 49 gpt silver, 0.90 gpt gold, 2.87% lead and 2.86% zinc, plus inferred resources of 1.30 million tons grading 63 gpt silver, 0.88 gpt gold, 2.55% lead and 2.28% zinc. The company is working to verify the historic resources as soon as possible. Then Endeavour Silver plans to lease a nearby 500 tpd processing plant. The company continues to work on the acquisition of additional nearby licenses to consolidate the existing resources.

Expansion of the exploration activities in the Province of Zacatecas

In September 2017, Endeavour Silver announced that it had secured the right to explore and mine for precious metals above the elevation of 2,000 meters above sea level on the 181-hectare Toro del Cobre concessions owned by Capstone Mining. Capstone's concessions are adjacent to the 75-hectare Calicanto concessions held by Endeavour Silver in Zacatecas, Mexico. Thereby the com-

pany tries to consolidate another project and to prepare it for a future production.

Catalysts for the coming months

Investors of Endeavour Silver can look forward to several important advancements during the coming months. The company plans a production decision for Terronera. A resource estimate is prepared for the Parral project.

Furthermore, the company plans to further lower the all-in sustaining costs. Endeavour Silver also plans the acquisition of additional projects that fit the production profile as well as additional licenses in the area of the current projects. The company will explore and expand these projects by means of an aggressive exploration program to extend the corresponding life of mines.

Summary

Currently Endeavour Silver is setting a tremendous pace. Beginning 2018 the company could put into operation one mine per year including a corresponding production increase. In the middle of 2015 the company had the plan to increase the silver production by 60% during the next three years. From the beginning of 2016 Endeavour Silver wanted to gradually increase the production to at least 16 million ounces of silver equivalent which would have catapulted the company into the field of the Senior Producers including all associated amenities like a higher valuation of every single ounce of silver and a possible twice as high valuation of the annual cash flows. Now it seems that this plan is postponed by one year. But at the end of the day the company may record an even higher production.

Exclusive interview with Bradford Cooke, CEO of Endeavour Silver

What did you and your company achieve within the last 12 months?

Endeavour Silver has been very busy over the past 12 months. With the precious metals starting to rise once again, management's focus turned from cutting operating costs to building three new silver-gold mines in Mexico.

We recently published a very positive preliminary economic assessment of our high grade El Compas mine project (mine #4) in Zacatecas; also a robust pre-feasibility study on our exciting new Terronera discovery (mine #5) in Jalisco; and acquired the prospective Parral properties (mine #6) in Chihuahua.

The Company strengthened its management team in order to execute the new growth strategy with two new appointments, Vice President, Operations and Vice President, Engineering. As well, three new properties were acquired in Zacatecas to facilitate the discovery of new resources and the possible future expansion of El Compas production.

Recent exploration drilling successfully delineated new high-grade mineralization at Terronera, El Compas and Guanacevi. Last but not least, management has resolved several operating issues that troubled Guanacevi so that production is now rising and costs are now falling once again.

Bradford Cooke, CEO

What are the main catalysts for your company within the next 6 months?

- Commence production at El Compas in early 2018
- Start development at Terronera for production in late 2019
- Explore and evaluate Parral for production in 2020
- Acquire and explore new brownfields projects near Guanacevi, Bolanitos and El Cubo to extend mine lives
- Expand new discoveries at Terronera, El Compas and Parral
- Acquire large new development project to drive next phase of growth

What is your opinion about the current conditions of the uranium market?

After falling to \$14 per oz at the end of the 5-year bear market, and bouncing up to \$21 per oz last year, then trading side-

ways in a narrow band this year, silver is finally getting ready for the next upward cycle to start a multi-year bull market. There may be one more downward test of support in the precious metals, but they should exit 2017 rising once again, and 2018 could be a break out year for gold and silver.

First Majestic Silver

Six highly profitable mines and 20 million ounces p.a. focusing on!

First Majestic Silver owns six producing mines and three major development projects.
(Source: First Majestic Silver)

First Majestic Silver is a Canadian mining company which focuses on silver. The motto of the company is "One Metal, One Country". This shows that the company is aiming for silver from Mexican mines. Accordingly, First Majestic Silver is advancing the development of its six current mines and exploration projects. In the second quarter of 2017 the company produced 2.3 million ounces of silver or 3.9 million ounces of silver equivalent (including all by-products) in the mines La Parrilla, San Martin, La Encantada, La Guitarra, Del Toro and Santa Elena.

of silver equivalent) as well as inferred resources of 4.4 million ounces of silver equivalent. At Santa Elena, First Majestic Silver is currently in the initial planning phase to replace the diesel generators with natural gas-powered generators. This could be a cost saving of 20%. In addition, the company completed the construction of the new San Salvador ramp in Q2 2017. This will ensure a production increase as well as a better access to the Tortuga Vein for exploration purposes.

La Encantada Silver Mine

La Encantada, an almost 100% silver mine, has a processing capacity of 3,000 tons per day. In Q2 2017 the mine produced around 375,500 ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 2.6 to 2.9 million ounces of silver equivalent at all-in costs of less than US\$ 12.90 per ounce. As of the end of 2016 La Encantada contained measured and indicated resources of 33.7 million ounces of silver equivalent (including reserves of 32.3 million ounces of silver equivalent) as well as inferred resources of 5.8 million

Santa Elena Silver-/Gold-Mine

The Santa Elena Silver Mine has a processing capacity of 3,000 tons per day. In Q2 2017 the mine produced around 1.4 million ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 5.4 to 6.0 million ounces of silver equivalent at all-in costs of less than US\$ 7.24 per ounce. As of the end of 2016 Santa Elena contained measured and indicated resources of 26.1 million ounces of silver equivalent (including reserves of 22.2 million ounces

ounces of silver equivalent. Like Santa Elena, First Majestic Silver plans the use of natural gas-powered generators instead of diesel generators to save costs. In addition, the construction of a roasting plant should start in 2017. The company wants to reprocess old stockpile material with the help of the roaster which could lead to an additional production of up to 1.5 million ounces of silver per year starting in 2018.

La Parrilla Silver Mine

La Parrilla Silver Mine has a processing capacity of 1,700 tons per day. In Q2 2017 the mine produced around 593,800 ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 2.9 to 3.2 million ounces of silver equivalent at all-in costs of less than US\$ 11.55 per ounce. As of the end of 2016 La Parrilla contained measured and indicated resources of 17.3 million ounces of silver equivalent (including reserves of 15.3 million ounces of silver equivalent) as well as inferred resources of 45.5 million ounces of silver equivalent. First Majestic Silver plans to connect the single mines with a modern underground 5 km long transport system. The company expects a decrease of the cash costs during the coming months and is discussing expansion possibilities. The concession area with 69,440 hectares hosts several historic mines which offer many expansion opportunities.

Del Toro Silver Mine

Del Toro Silver Mine has a processing capacity of 1,000 tons per day. In Q2 2017 the mine produced around 712,000 ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 2.3 to 2.6 million ounces of silver equivalent at all-in costs of less than US\$ 11.30 per ounce. As of the end of 2016 Del Toro contained measured and indicated

resources of 26.2 million ounces of silver equivalent (including reserves of 16.4 million ounces of silver equivalent) as well as inferred resources of 43.7 million ounces of silver equivalent. Currently Del Toro is producing a silver-lead concentrate with increasing recovery rates for both metals.

San Martin Silver Mine

San Martin Silver Mine has a processing capacity of 1,300 tons per day. In Q2 2017 the mine produced around 577,600 ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 2.0 to 2.2 million ounces of silver equivalent at all-in costs of less than US\$ 12.41 per ounce. As of the end of 2016 San Martin contained measured and indicated resources of 23.1 million ounces of silver equivalent (including reserves of 18.3 million ounces of silver equivalent) as well as inferred resources of 32.6 million ounces of silver equivalent. San Martin has an area of 37,500 hectares and hence additional exploration potential. First Majestic Silver did notice this quickly and the mine was expanded to the actual 1,300 tpd capacity. This guarantees higher production rates and therefore reduced costs.

La Guitarra Silver Mine

La Guitarra Silver Mine has a processing capacity of 400 tons per day. In Q2 2017 the mine produced around 229,200 ounces of silver equivalent. For the full year 2017 the company is aiming at a production of 1.4 to 1.6 million ounces of silver equivalent at all-in costs of less than US\$ 15.45 per ounce. As of the end of 2016 La Guitarra contained measured and indicated resources of 13.1 million ounces of silver equivalent (including reserves of 12.2 million ounces of silver equivalent) as well as inferred resources of 8.3 million ounces of silver equivalent. The La

Guitarra claims extend over more than 39,000 hectares. First Majestic Silver plans an increase of the processing capacity to 1,000 tpd.

Well advanced development projects

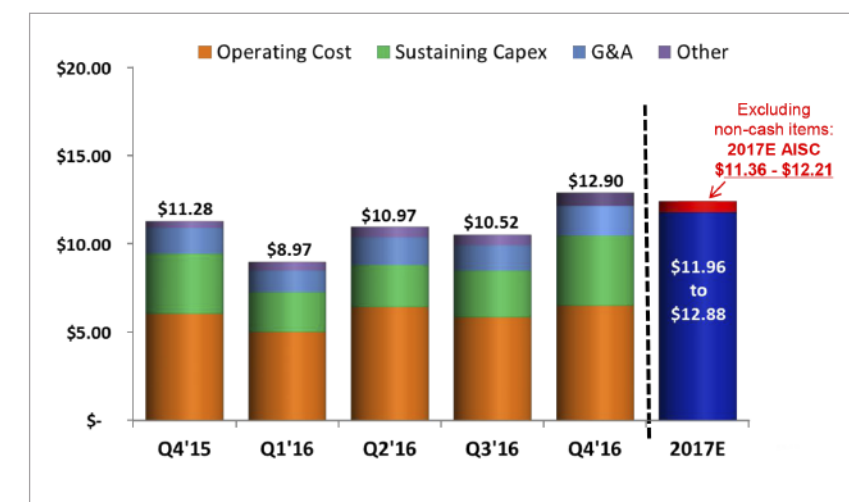

Besides the profitable mines First Majestic also owns several development projects. Two of them are especially well advanced.

The La Luz project is located in the State of San Luis Potosí, Mexico and covers 5,000 hectares. The project hosts resources (as of 2008) of 46.8 million ounces of silver.

The Plomosas project is located in the State of Sinaloa, Mexico and covers 7,000 hectares. The project hosts historical resources of 11 million silver equivalent ounces. First Majestic Silver is currently working on an improvement of the infrastructure and on an upgrade of the historical resources to NI 43-101 resources.

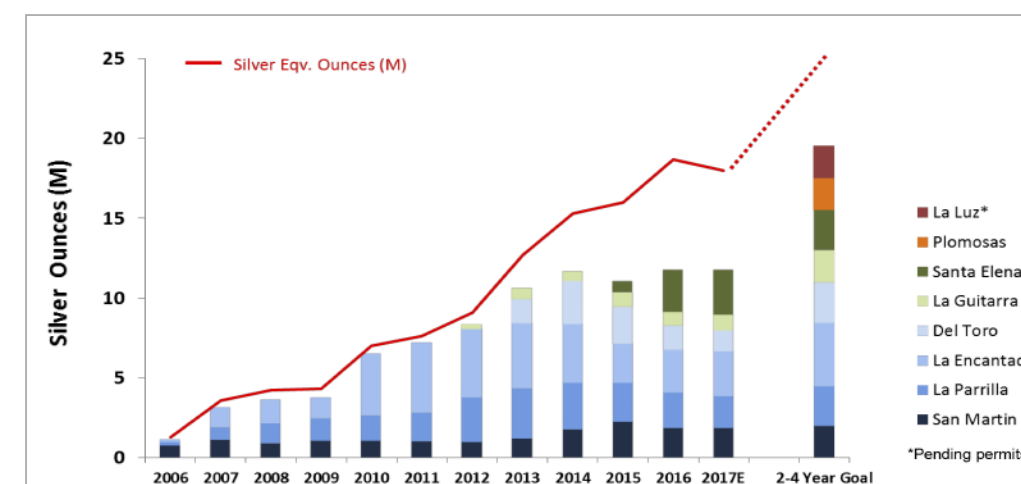

Mastermind Keith Neumeyer

Behind the fast development of First Majestic Silver is its CEO, Keith Neumeyer. Neumeyer's achievements are legendary. He advanced First Quantum Minerals

Declining All-In-Sustaining-Costs
(Source: First Majestic Silver)

from the ground up to a market cap of several billion US\$. First Quantum Minerals' share price peaked at almost US\$ 30. Considering an initial quotation of US\$ 0.50 this is a huge price gain. The issue price of First Majestic Silver's shares was CA\$ 0.16 and not long ago the share price peaked at CA\$ 24. You can calculate the profit the investors of the first hour could have made. Neumeyer's third creation is First Mining Finance, a holding company specializing in commodity projects by acquiring high-value assets in North America. This company was launched two years ago and already profits peaked at 200%.

Target of 20 million silver ounces
clear in sight
(Source: First Majestic Silver)

Summary: Target of 20 million silver ounces clear in sight + exploration in focus

First Majestic Silver has a clear objective of reaching an annual production of 20 million ounces of silver as soon as possible. The increase of the processing capacity to 1,000 tpd at La Guitarra, the installation of a roasting unit at La Encantada with the possibility of additional production of 1.5 million ounces of silver per year starting in 2018 and the possible cost reduction at that mine by replacing the previous diesel generators with natural gas-powered generators are considered as short and mid-term catalysts. Furthermore, the possible installation of a LNG plant is planned at Santa Elena.

The installation of connecting adits should lead to cost reductions and facilitate future expansions. In addition, the Plomosas project has a tremendous exploration potential.

Overall, in the current year First Majestic Silver's focus is on the expansion of the resource base. More than CA\$ 27 million are budgeted for that!

All in all, First Majestic Silver is excellently positioned. As of June, the 30th 2017, the company had US\$ 126.9 million in cash or cash equivalents. The company would be able to expand its mines and mining projects without problems and acquire additional lucrative assets. First Majestic remains number 1 of the mid-tier silver producers in Mexico.

- ▶ Connection to power grid at Santa Elena to reduce operating costs
- ▶ Completion of underground haulage system at La Parrilla aimed to further reduce costs and the potential for future expansion
- ▶ Exploration discovery potential at Plomosas and Santa Elena's Ermitaño West property

What is your opinion about the current conditions of the silver market?

The silver market itself continues to be in a deficit with worldwide mine production continuing to drop while consumption continues to rise. Miners produced 800,000,000 ounces of silver in 2016 and consumption was 1.1 Billion ounces. Obviously, this cannot continue. Silver consumption is expected to continue to grow with the move into green technologies such as electric cars, solar panels, etc.

With silver prices being so cheap, miners cannot keep up with demand and silver prices need to go up substantially in order to meet future needs as the world goes green.

The installation of a roasting unit at La Encantada will lead to an additional production of 1.5 million ounces of silver per year starting in 2018.
(Source: First Majestic Silver)

Keith Neumeyer, CEO

Exclusive interview with Keith Neumeyer, CEO of First Majestic Silver

What did the company achieve within the last 12 months?

Over the last 12 months the team has continued to focus on innovation and improving the techniques in which mine ore is processed. Items like: automatic lime feeding, pH monitoring, oxygen injection, etc. have played a dramatic role at improving the metallurgical recoveries across all our operations.

Silver recoveries have improved significantly from the mid-60's to the current rate of 80%. Over the next 12 to 24 months, recoveries are anticipated to improve further to our corporate goal of 90% through the adaptation of micro-bubbles and fine grinding technologies. Every 1% increase in recoveries equates to approx. 100,000 ounces of additional silver, or \$1.7M in revenue.

What are the main catalysts for the company within the next 6 months?

The roaster project at our La Encantada mine is our main catalyst which will drive silver production to higher levels in the months ahead. This new facility is expected to increase production at La Encantada from 2.5M oz to over 4.0M oz of silver per year. Equipment is being delivered and assembled on site in the fourth quarter of 2017 and the roaster is expected to be ramping up production in the first quarter of 2018.

Other catalysts include:

- ▶ La Guitarra expansion decision to 1,000 tpd
- ▶ Continued improvements in metallurgical recoveries through implementation of microbubbles, fine grinding & other R&D

(Source: BigCharts)

Kootenay Silver

Large Resource base and solvent joint venture partner as guarantees of success

Kootenay Silver is a Canadian and Mexican based silver development company with three well advanced projects in northern Mexico. The company has one of the largest silver resource bases of all non-producing silver juniors in Mexico. The company is currently completing a number of aggressive drill programs to rapidly advance its three top projects.

La Cigarra Silver Project: Location and surrounding mines (mining projects)

The first of these three silver projects is La Cigarra, covering over 18,000 hectares in the state of Chihuahua, Mexico. La Cigarra is located in the Parral Silver District which hosts, among other things, Endeavour Silver's future Parral Mine, Levon Resources' mega silver project Cordero and other top silver projects (all within a radius of only 20km). The Parral Silver District hosts over 2.1 billion ounces of silver (total amount of produced silver and current resources). The two largest mines alone, Santa Barbara and San Francisco del Oro, located only 5km and 20km respectively from the La Cigarra silver project have over 800 million ounces of silver from this huge resource.

(Source: Kootenay Silver)

La Cigarra Silver Project: Resources and Potential

The interesting thing is the aforementioned mines are winning the silver from depth of 1.000m and more, but La Cigarra has visible silver occurrences at the surface. To date the mineralized system has been traced over approximately 6.5km. The current NI 43-101 resource estimate for the two areas San Gregorio and Las Carolinas having a strike length of 2.4km in total. According to the 2015 resource estimate, La Cigarra hosts total resources of close to 63 million ounces of silver, 49,000 ounces of gold, around 66.5 million pounds of lead and 90 million pounds of zinc and the resources at San Gregorio and Las Carolinas are open along strike and to depth. In addition, La Cigarra has at least 11 areas outside of which only 4 subareas have been superficially explored for additional deposits.

La Cigarra Silver Project: Current work and catalysts

La Cigarra provides a big exploration potential which Kootenay Silver wants to probe. Currently, the company is completing several drill programs with up to 7.500m each. One program is testing in the vicinity of the current resource and the other is focused on peripheral targets. At the same time the company is reinterpreting the resource model to identify especially high-grade areas. In addition, the metallurgical test works are continuing to investigate if a future production can be achieved by means of heap leaching methods, which would reduce capital and operating costs. Furthermore, the current resource estimate shall be updated and based on this a preliminary economic assessment (PEA) will be prepared. In July 2017 Kootenay Silver reported the discovery of a verifiably silver bearing area within the La

Navidad Zone situated approximately 500 meters to the east of the San Gregorio Zone.

In August 2017 the company reported the new discovery of a mineralized zone about 1,000m south of the actual resource area. There Kootenay Silver could prove silver grades of up to 799 gpt.

The best drill hole provided intervals with average grades of:

- ▶ 91.32 gpt silver over 29.5m, including
- ▶ 123.24 gpt silver over 19.25m, with
- ▶ 435.36 gpt silver over 2.5m, and
- ▶ 113.78 gpt silver over 10.75m

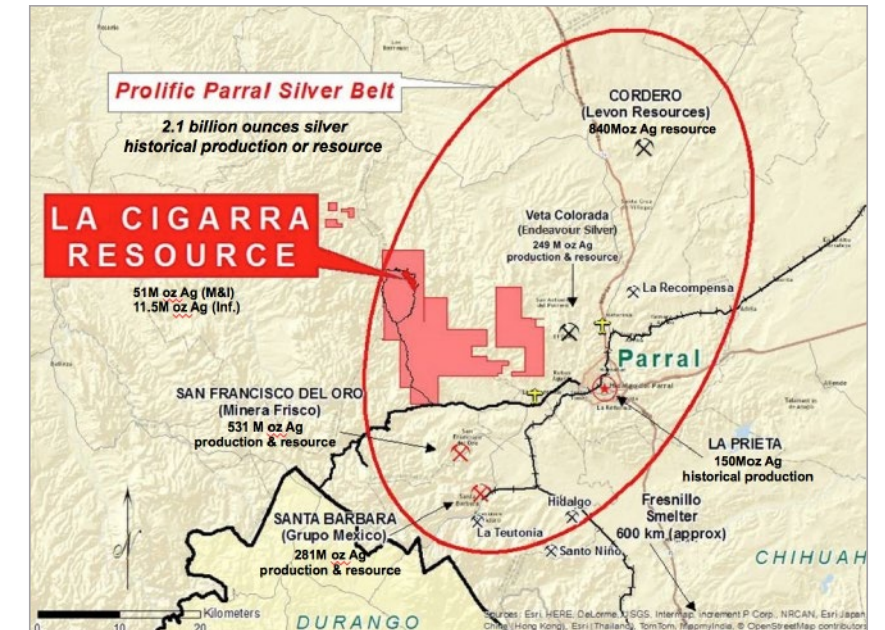

Another drill hole 140m northeast of the aforementioned hole provided:

- ▶ 168.64 gpt silver over 7.0m, within
- ▶ 121.25 gpt silver over 12.0m and
- ▶ 92.88 gpt silver over 24.20m

This opens for Kootenay a totally new high-grade exploration potential in this area!

Promontorio Mineral Belt Silver Project: Location and Joint Venture

The second project, Promontorio, consists of several concessions within the Promontorio Mineral Belt in the state of Sonora, Mexico. The company has a joint venture agreement with Pan American Silver on these concessions according to which Pan American can earn a 75% interest in the whole Promontorio project by spending at least US\$ 8 million for the development of the project within 4 years (starting February 2016) and paying additional US\$ 8 million to Kootenay Silver. Pan American Silver has already made an advance payment of CA\$ 350.000 and bought shares of Koo-

La Cigarra is located in the Parral Silver District which hosts, among other things, Endeavour Silver's future Parral Mine, Levon Resources' mega silver project Cordero and other top silver projects (all within a radius of only 20km). (Source: Kootenay Silver)

tenay Silver valued CA\$ 2 million (CA\$ 0.22 per share).

Promontorio

The Promontorio Mineral Belt project primarily consists of two sub-projects. Promontorio covers an area of around 15 x 6.5km and hosts an already large silver resource which contains in total 116.3 million ounces of silver equivalent in the resource categories measured, indicated and inferred. It is important to mention that these are open pit resources which can be exploited using low cost open pit methods. In addition, there are numerous potentially top-class exploration targets on the extensive project area such as the Cameron Vania trend.

La Negra

The high grade La Negra deposit was identified 7km north of the Promontorio deposit. La Negra has no resource base to date although Pan American Silver is

preparing an initial resource estimate. To this end 66 drill holes totaling over 6,800m were drilled. According to previous drill results, La Negra provides an open pit scenario as well. Drilling confirmed a high-grade resource down to a minimum depth of 300m whereby the area with traces of silver at the surface was extended to 500m x 200m. Some of the drill results were a big surprise.

Short high-grade intersections were encountered such as:

- ▶ 3,040 g/t Ag over 1m;
- ▶ 1,338 g/t Ag over 6m;
- ▶ 582 g/t Ag over 2.5m;
- ▶ 529 g/t Ag over 7.5m and
- ▶ 468 g/t Ag over 18m.

And exceptional long intersections such as:

- ▶ 420 g/t Ag over 50m;
- ▶ 213 g/t Ag over 28m;
- ▶ 194 g/t Ag over 40.8m and
- ▶ 156 g/t Ag over 200m.

This indicates a medium to high grade resource with high tonnage and high grade hot spots which can be mined by aforementioned open pit operation. Metallurgical tests indicate possible high recovery grades of 80 to 90% by means

of heap leaching. Pan American Silver started a new drilling campaign in the second quarter of 2017. The joint venture agreement with Pan American Silver could help Kootenay Silver become a junior producer almost risk-free. Pan American not only pays the majority of the current development costs, but also covers all arising construction costs. All payments that exceed Pan American Silver's 75% interest, will bear interest but Kootenay Silver can "easily" pay back that amount with the future cash flow. But only in the event, that Promontorio or La Negra will become operating mines.

Additional projects host growth potential

Besides La Cigarra and the Pan American Silver joint venture, Kootenay Silver has several additional potential top-class projects in Canada and Mexico which in part were optioned out. The Silver Fox project for example, which is currently advanced by the industry giant Antofagasta. A 3,000m drill program was initiated in March 2017. In addition, the company could secure a 100% interest in the Mark project in British Columbia in June 2017. In conjunction with that transaction the company entered into an earn-in agreement with Antofagasta whereby

Antofagasta can, over a 4-year term, earn a 65% interest in the Mark Project by investing US\$3 million in the development of the project. With that Kootenay keeps the chance to make new discoveries outside the flagship projects, creating a certain growth.

Catalysts for 2017

2017 is for Kootenay Silver a work intensive year. The company has identified in total 11 drill targets of which it will drill test (up to 7,500m) at least three (La Navidad, Ram and Soledad). In the La Cigarra deposit additional drill holes (7,500m) will be drilled to extend the deposit along strike. In addition, the company wants to refine the current resource model to increase the grades on one hand and to identify additional drill targets on the other hand. At the same time the metallurgical tests will be continued to confirm the feasibility of the heap leaching. All these activities will lead to an extended resource estimate and a PEA. The joint venture partner Pan American Silver started a drill program for Promontorio/La Negra in the second quarter of 2017.

Exploration activities are also planned on the other development projects. Antofagasta wants to drill (3,000m) on Silver Fox

and has to show some action at the new Mark Project and work programs will be carried out at Cervantes and 2X's Fred.

Summary

Kootenay Silver can confidently be called a silver power house. The company has not only its own well-advanced silver project with a large resource base but also a joint venture with one of the biggest silver producers worldwide. That one provides Kootenay Silver not only with constant financial resources (in total US\$ 8 million) over a period of 4 years but also pays all exploration costs on one of the most interesting new discoveries of the past years. Should indeed Promontorio and La Negra host a low cost mineable silver resource, which is most likely, then Kootenay Silver doesn't have to spend any money until commencement of production since Pan American Silver will completely finance all initial capital costs. In addition, both projects (La Cigarra and Promontorio/La Negra) have a high upside potential for their already large resource bases. Several drill campaigns on all projects should provide an increased news flow during the coming weeks and months. Finally, Kootenay Silver's financial resources are outright outstanding.

Two new discoveries at La Cigarra: Las Venadas and Ram
(Source: Kootenay Silver)

Exclusive interview with James McDonald, CEO of Kootenay Silver

What did you and your company achieve within the last 12 months?

We have accomplished many things in just over a year. We secured a carried to production deal with world leading major

Pan American Silver. We acquired 100% of the La Cigarra deposit free of royalties bringing in another 51.5 million ounces of silver measured and indicated plus 11.5 million ounces of inferred resource. We made two brand new drill discoveries on

James McDonald, CEO

La Cigarra and continue to drill test various zones with the objective of making more discoveries to expand the resource size.

What are the main catalysts for your company within the next 6 months?

There are several activities underway to provide plenty of catalysts. Firstly, we have the two new discoveries on La Cigarra called the Las Venadas and Ram that will need more drilling. We have high expectations especially for Las Venadas as it looks stronger than what we see in the resource itself and we are still drilling a number of other targets close to the La Cigarra deposit before year end. Pan American is still drilling the high grade La Negra discovery on the Promontorio project and we expect a maiden resource estimate to be compiled on it before year end. In addition, our partner

Antofagasta PLC is drilling the Silver Fox project in Canada and our Cervantes gold porphyry will be drilled before year end by partner Aztec Minerals. So, lots of drilling and lots of news to come. Not just the next 6 months but the next 12.

What is your opinion about the current conditions of the silver market?

With declining production and increasing demand our expectation for silver is continued price appreciation in the precious metal. Silver has an interesting dynamic because it has large industrial consumption combined with its use as money or more to the point a store of value like gold. Another positive indicator is the silver to gold ratio which sits at it's very high end historically. That ratio will come down at some point and bringing it just into a historic median would put it well over \$20 dollars per ounce today.

(Source: BigCharts)

Levon Resources

One of the biggest unexploited silver deposits world-wide waiting for uplifting!

Levon Resources is a Canadian silver-gold-zinc-lead development company holding one of the largest unexploited silver deposits of the planet. Within 5 years the company could identify a silver resource of 488 million ounces plus significant gold, zinc and lead resources as by-products. In total Levon Resources has over 1.2 billion ounces of silver equivalent!

Cordero Flagship Project – Resource

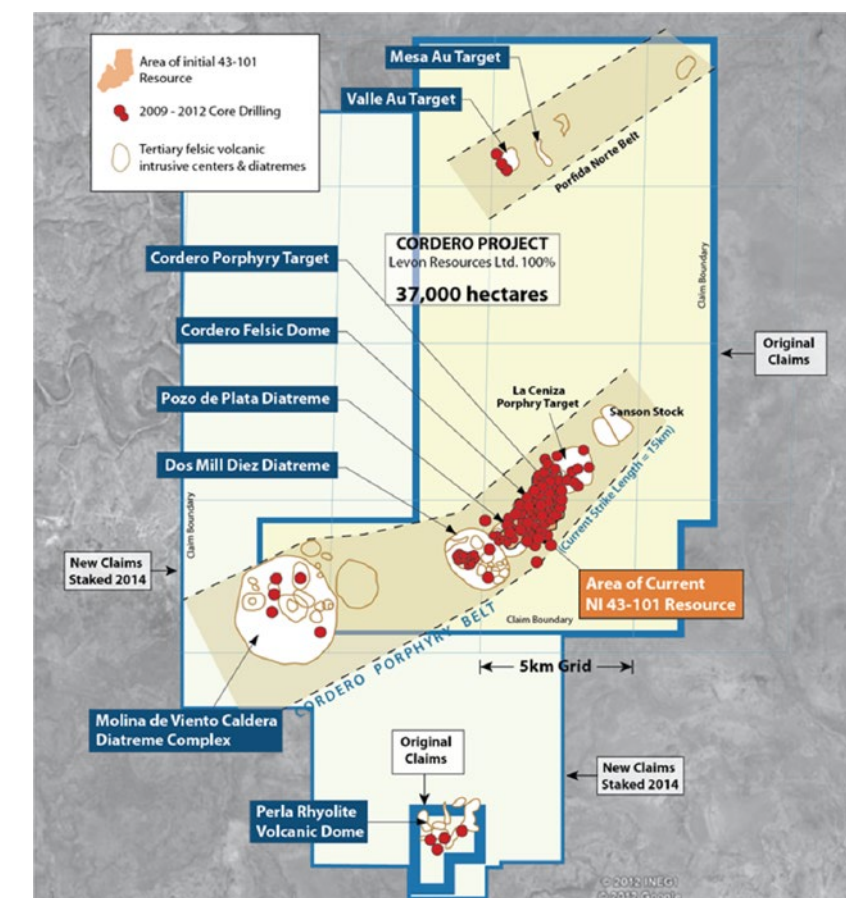

The Cordero project is located in the State of Chihuahua, Mexico, covers 37,000 hectares and Levon Resources owns a 100% interest in the project. Two northeast trending porphyry belts, the Cordero Porphyry and the parallel Perida Norte Belt, 10 km further to the north are running through the licence area. The project also includes the Perla Volcanic Dome to the south covering an area of 430 hectares. The project is part of the Chihuahua-Uacatecas silver-gold belt which hosts many more significant deposits like Penasquito (Goldcorp), Pitarilla (Silver Standard), Camino Rojo (Goldcorp) and San Agustin (Silver Standard). These deposits have similar geological and geochemical characteristics. Since the beginning of the exploration work in 2009 the company completed 126,000 m of drilling which provided Levon Resources with some impressive results. According to the current NI 43-101 resource estimate the deposit contains an indicated resource of 488.5 million ounces of silver, 1.37 million ounces of gold, 4.7 million pounds of lead and 9.0 million pounds of zinc as well as an inferred resource of 44.4 million ounces of silver and 84,000 ounces of gold. To date the explored area hosts in total more than 1.2 billion ounces of silver equivalent. And the resource isn't completely defined. It extends from the sur-

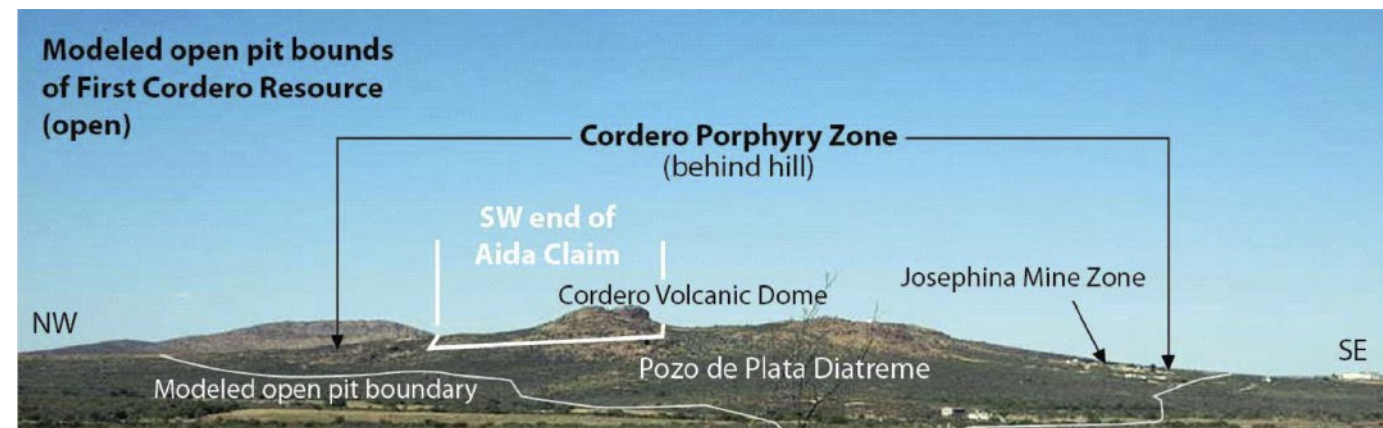

face – visible in outcrops – down to a depth of several hundred meters. The current resource is still open to depth and in several directions, which provides additional exploration potential.

Cordero Flagship Project – Positive Economic Assessment

In the spring of 2012 Levon Resources announced a positive preliminary economic assessment (PEA) that included only 30% of the stated resources. The company assumed a four-stage open pit operation. Based on the price of US\$ 25.15 per ounce of silver, US\$ 1,384.77 per ounce of gold, US\$ 0.96 per pound of lead and US\$ 0.91 per pound of zinc an internal rate of return of 19.5 % pre-

The Cordero project covers 37,000 hectares and Levon Resources owns a 100% interest in the project.
 (Source: Levon Resources)

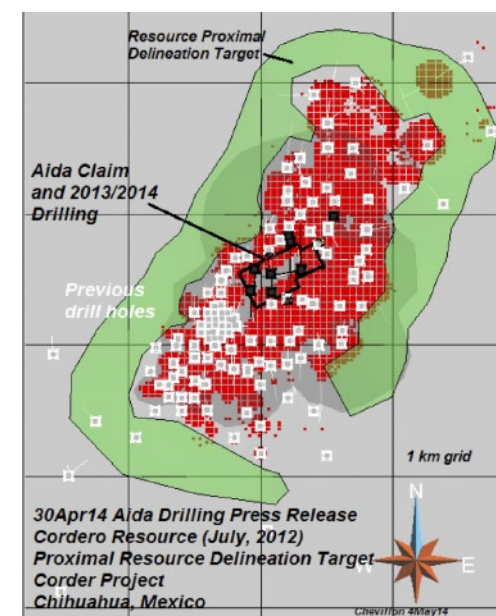

Location of several silver deposits and the proposed pits
(Source: Levon Resources)

tax or 14.8 % after tax was calculated. The processing plant would have a capacity of 40,000 tons per day and would thereby be one of the largest plants on the planet! The payback period would be around 5 years. The big advantage for the production would be the very favorable strip ratio of 1.2:1. The life of the mine would be an initial 15 years with a four-stage open pit system which could be expanded. Levon Resources would also set new standards with the size of the pits, 3 km long and up to 2.3 km wide!

Acquisition of AIDA Claim makes efficient mine design possible

Another milestone in the company's history was the acquisition of the AIDA Claim in July 2013. It might be small with only 15.8 hectares but plays an important strategic role in the development of the Cordero Project because it is located in the center of the main resource. In 2013 Levon Resources had started a drilling program at the Aida claim and several other targets that delivered some very good results including 28 m with 275.1 gpt of silver equivalent, 24 m with 106.9 gpt of silver equivalent and 98 m with 95.1 gpt of silver equivalent.

lent. One of the drill holes had a continuous silver mineralization over 438 m starting at the surface! In 2012 the aforementioned preliminary economic assessment was still based on a four-stage open pit design and the AIDA claim was not included. Now a design with 8 open pits seems to be possible. Additional drill holes in other areas of the project provided long low-grade intersections such as 152 m with 80.6 gpt silver, 1.41% zinc, 2.27% lead and 0.61

The AIDA-claim lies in the center of the main resource.
(Source: Levon Resources)

gpt gold as well as shorter high-grade intersections such as 26 m with 410.1 gpt silver, 2.92% zinc, 7.06% lead and 1.057 gpt gold in the Pozo de Plata Diatreme. The latter resource is analogous to the underground resource at Penasquito.

Future Catalysts

In the summer of 2017 Levon Resources completed an 18-hole drill program with a total length of 5,655m which was focused at infill drilling in the central area of the 2014 Cordero Resource. The focus was especially at the higher-grade gold-bearing sections that would be perfectly suitable for a starter pit. In addition, the company studied the most optimal extension of the starter pit towards the southeast. Furthermore, a previously little tested gap within the Cordero Felsic Dome was closed. After completion of the drilling Levon Resources will immediately commission a new economic assessment which will include the AIDA Claim completely. In addition, a review is planned if an increase of the processing capacity of the planned plant from 40,000 to 80,000 tpd would have a significant effect on the production economics of the mine. Simultaneously engineering and metallurgy studies are ongoing to optimize the mine model on the one hand and to increase the recovery rate on the other hand.

Levon Resources pursues a partnership with a major mining company

Levon has already signed confidentiality agreements and standstill agreements regarding Cordero with several major mining companies, which were very interested in the acquisition of the AIDA Claim. Levon has no intentions to bring

(Source: Levon Resources)

Cordero to production but is pursuing a partnership with a major mining company.

Additional developed mining projects targeted

Besides Cordero Levon Resources has interests in or owns completely several projects in the Canadian province of British Columbia. These are at an early stage and are not a priority for the company. Due to the enormous experience of the management, the company can bring projects from discovery to production whereby all steps are carried out highly professionally and according to the highest standards. Currently Levon Resources is evaluating numerous projects in Latin America which could generate a positive cash flow and high returns very quickly by contribution of the management capacities and with relative low financial expenditure.

Very experienced management team

Levon Resources has a very experienced management team, which has brought to production several mining projects.

Ron Tremblay, President and CEO, brings over 25 years of experience in the mine finance sector to Levon. In October 2006 he was appointed President of the company. He was substantially involved in revitalizing Levon Resources as well as the acquisition and development of the Cordero Project. Vic Chevillon is Vice President Exploration and a member of the Board of Directors. The geologist has over 36 years of exploration experience working with major mining companies like Noranda, Homestake, Placer Dome and Barrick Gold.

Summary

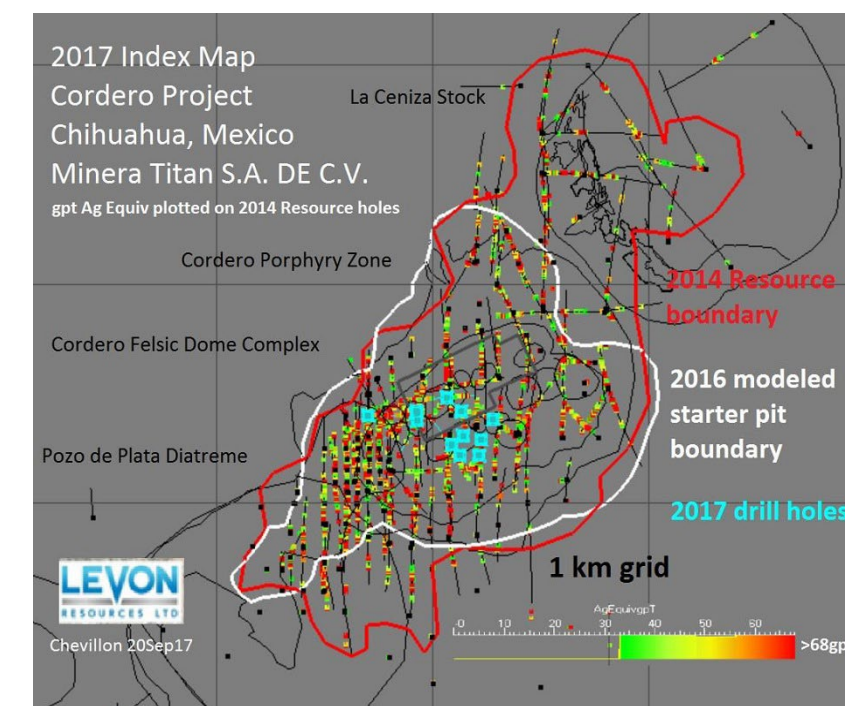

Levon Resources has one of the world-wide largest silver deposits. This stock seems to be especially interesting for investors expecting higher silver prices because an increase of the silver price by US\$ 1 would increase the value of Levon's silver resource by US\$ 500 mil-

lion. Levon's leverage is enormous and the project offers many more opportunities and potential for a resource expansion. One should expect that during the coming months the silver companies will be separated into winners and losers. Then the market will realize that given the enormous resource basis Levon Resources is currently undervalued. The large zinc deposits could especially tip the scale for a production decision because it can be assumed that there will be a huge supply deficit for zinc during the coming years. The shares of Levon Resources offer investors who expect in the medium-term a significant higher silver price a very good chance to risk ratio. In addition, there is always the chance of the participation of a major mining company or a takeover offer.

Gold at \$1300 / oz, we have 1.4M oz and silver (\$17/oz), 488 Moz indicated resource.

What is your opinion about the current conditions of the silver market?

Silver is recovering, but with Levon and Cordero you are also exposed in a big way to the higher prices in zinc, lead and gold. Our resource is open to expansion and exposed at surface in an ideal mining jurisdiction.

(Source: Levon Resources)

Ron Tremblay, CEO

Exclusive interview with Ron Tremblay, CEO of Levon Resources

What did you and your company achieve within the last 12 months?

Levon strategically in-fill drilled a central part of the 2014 resource to better define it and try and improve the grade. From the raw drill results (NR 26Sept17) it looks like we have improved a starter pit scenario by extending a near surface gold zone in the center of the deposit. The next step is to update a 2017 resource and complete a PEA in Q4.

What are the main catalysts for your company within the next 6 months?

Our key asset is Cordero, Mexico, a district scale porphyry silver, zinc, lead, gold discovery with a huge resource (NR 2014). The economic projections for mining the resource improve as the metals market recovers. In the last year zinc is up 35% to record highs and we have 9 billion pounds of zinc in the resource. Lead too is up 12% over the last year with 6 billion pounds in the resource.

(Source: BigCharts)

Metallic Minerals

On its way to the next coup in one of the world's highest-grade silver districts

Metallic Minerals is a Canadian development company which has secured a big part of an extreme high-grade silver district in northwestern Canada. The particular strength of the company is its very successful management which owns a big part of the issued shares. The goal of the company is the acquisition and development of high grade gold and silver projects in mining districts which are underexplored on the one hand and host already world-class projects on the other. Although the company has found that in the Keno Hill Silver District in the Yukon Territory.

Keno Hill Silver District

Metallic Minerals' flagship project Keno-Lightning is situated in the Keno Hill Silver District of Canada's Yukon Territory. The Keno Hill Silver District is considered to be as one of the most productive and richest silver producing districts in the world. To date 40 mines produced over 200 million ounces of high-grade silver (average grade of 44 ounces or 1,373 grams of silver per ton) which makes this district to the second most profitable silver district in Canada. In the Keno Hill Silver District more silver by value was produced than gold in the Klondike for which the Yukon is famous for.

Keno Lightning Silver Project: Location and Infrastructure

Metallic Minerals owns the majority of the claims in the eastern section of the core area of the Keno Hill Silver District. The western part belongs to Alexco Resource, which operates the Bellekeno silver mine there. This mine is considered as one of the highest-grade silver mines worldwide. Alexco regularly achieved production grades of up to 1,000 gram silver per ton. The Bellekeno mine lies 1.5km west of Metallic Minerals' Keno-Lightning Project (100% Metallic Minerals). Within its licen-

ses, Alexco has an actual resource of over 80 million ounces of silver plus gold, lead and zinc. The fact that the Keno Hill District has a long production phase makes it one of the northern Canadian regions with the best infrastructure. This district has a regional processing plant as well as a highway connection and is connected to the power grid (138kV).

Keno Lightning Silver Project: Geology and Potential

Several mineralized trends stretch from Alexco Resource's mining project on to Metallic Minerals' license area covering 112.5km². Seven historic mines are located in this area from which four had average production grades of more than 5,000 gpt silver including the past producing mines Duncan averaging 26,146 gpt silver equivalent, Vanguard with 12,178 gpt silver equivalent, Caribou Hill with 8,276 gpt silver and Silver Basin with 7,007 gpt silver equivalent. In this context it is interesting that Metallic Minerals' license areas saw little exploration in the past due to the division of the area in many small privately held claims. Metallic Minerals was able to consolidate these for the first time.

Keno Lightning Silver Project: High-grade Exploration Results

Typical for the area is a 1 to 10m thick mineralization with grades ranging from 200 to 5,000 gpt silver indicated by previous results including some absolute high-grade results.

The following results are from trench samples:

- ▶ 3.30m @ 2,332 gpt silver, 1.38 gpt gold, 8.5% lead and 1.1% zinc (Caribou Hill);
- ▶ 2.00m @ 2,953 gpt silver, 1.01 gpt gold and 8.11% lead (Caribou Hill);

- ▶ 0.90m @ 3,168 gpt silver and 4.67 gpt gold (Homestake);
- ▶ 3.00m @ 74 gpt silver, 10.00 gpt gold and 1.98% lead (Homestake); and
- ▶ 1.00m @ 11.05 gpt gold (Homestake).

Diamond drill holes returned additional top results. Several drill holes at Homestake had significant intervals with over 300 gpt silver equivalent:

- ▶ 2.80m @ 59 gpt silver, 3.39 gpt gold from (a depth of) 47.3m;
- ▶ 0.22m @ 4,027 gpt silver, 0.17 gpt gold from 73.2m; and
- ▶ 0.74m @ 359 gpt silver, 4.88 gpt gold from 33.4m.

Nine drill holes at Caribou Hill also returned significant intervals with over 300 gpt silver:

- ▶ 1.40m @ 1,696 gpt silver from 15.5m;
- ▶ 0.50m @ 1,787 gpt silver and 2.30 gpt gold from 22.9m;
- ▶ 1.60m @ 1,183 gpt silver from 34.7m; and
- ▶ 0.50m @ 1,046 gpt silver, 0.77 gpt gold and 3.39% lead from 35.0m.

In March 2017 Metallic Minerals could present the best results to date. Surface samples returned among other things, up to 8,800 gpt silver or 11,063 gpt silver equivalent!

As illustrated by the results above, high grade mineralization is present at the surface in several areas. Airborne geophysical surveys identified more than 40 structures which could host potential high-grade silver/gold deposits.

Keno-Lightning Silver Project: Exploration activities in 2017

Metallic Minerals has identified twelve priority target areas which are explored for relevant silver grades in 2017. The exploration work is comprised of mapping

as well as geochemical and geophysical surveys. Further, the company examines historic exploration reports which could provide insight regarding potential deposits.

In May 2017 Metallic Minerals commenced a CA\$ 1.5 million exploration program which will highlight the future drill targets. The following drill campaign, started in August 2017 aimed primarily at the exploration of extensions of the known high-grade Mineralization in strike direction and to depth. Furthermore, the company wants to specifically search for top-class occurrences, which were little noticed to date, in other areas of the vast license area.

Expansion of the Keno Lightning Silver Project

In September 2017 Metallic Minerals announced that the company had acquired a 100% interest in 53.5 square kilometers of new mineral properties in the Keno Hill silver district. These properties have potential to host Keno type high-grade silver-lead-zinc mineralization and are adjacent to, or contiguous with, Metallic Minerals' Keno Silver property and Alexco Resource Corp's Keno Hill properties. This Acquisition expands the Company's total district land position to 166 km².

McKay Hill Project

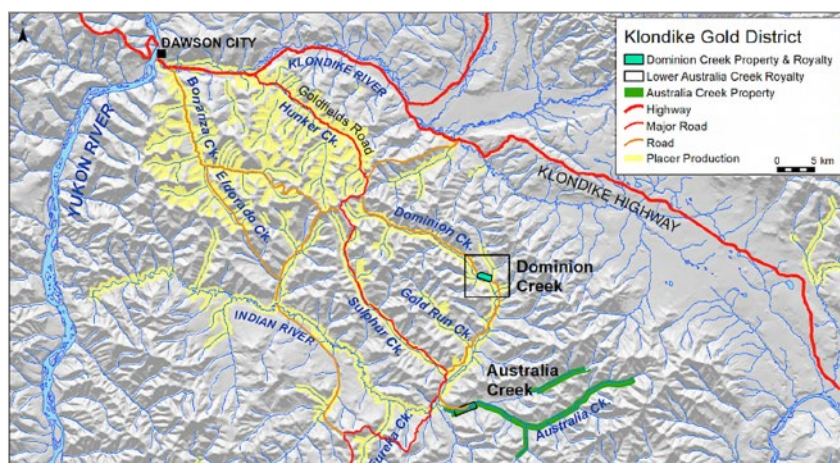

Metallic Minerals' second project, McKay Hill, is located 40km northwest of Keno-Lightning. McKay Hill covers 29.6km² and is owned 100% by Metallic Minerals. The project area has been mined in the past. The project is not far from ATAC Resources' Tiger deposit which hosts actual resources of 670,000 ounces of gold. McKay Hill is located in a previous sparingly explored region with the potential for another high-grade silver/gold district. Metallic Minerals has already

identified five new zones with similar geophysical signatures as the known mineralization.

Initial sampling returned high-grade results:

- ▶ 57.9 gpt silver, 1.37 gpt gold, 1.51% lead, 4.70% zinc and 0.63% copper.
- ▶ 668 gpt silver, 15.6 gpt gold, 2.40% lead, 0.94% zinc and 3.9% copper.
- ▶ 646 gpt silver, 16.8 gpt gold, 27.0% lead, 0.14% zinc and 0.64% copper.

The company plans an extensive development program in preparation of the drilling work in the project area.

Location of the royalty licenses.
(Source: Metallic Minerals)

Royalty Agreements

In September 2017 Metallic Minerals entered into two separate agreements for the acquisition of two mining rights along sections of the Australia Creek and Dominion Creek. Both creeks are located within the Klondike gold district near Dawson City. On Australia Creek Metallic Minerals secured rights for 26 miles of river in total and for one mile on Dominion Creek. Concurrently the company entered into production royalty agreements with an experienced alluvial mining operator for both river sections. This operator can dig for gold in both sections and in return will pay Metallic Minerals a roy-

alty of 12% (Australia Creek) und 15% (Dominion Creek). By this Metallic Minerals is securing an ongoing cash flow which, for example, could finance exploration activities on the other projects.

World-class management team

The management around CEO Greg Johnson has an impressive track record. Among other things it was involved in the discovery and expansion of the deposits Donlin Creek (40 million ounces of gold), Galore Creek (9 billion pounds of copper, 5 million ounces of gold, 100 million ounces of silver) and Wellgreen (5 million ounces of PGEs plus gold, 3 billion pounds of nickel and copper) and could raise over \$650 million for previous projects.

CEO Greg Johnson was among other things President & CEO of Wellgreen Platinum and South American Silver, co-founder of NovaGold and exploration manager of Placer Dome (now Barrick). Director Bill Harris is the founder of Northern Freegold and has been active in the Yukon Territory his whole life.

Executive Vice President Susan Craig has 25 years experience in the Yukon and in British Columbia and is specialized in permitting and negotiations with the government and First Nations. She led the Environmental Assessment process for NovaGold's Galore Creek project and is a director of the Yukon Energy Corporation, the Yukon Mineral Advisory Board and the Yukon Chamber of Mines. Vice President, Exploration Scott Petsel was, among other things, project manager at NovaCopper and NovaGold and had senior exploration positions at Placer Dome (now Barrick) and Echo Bay (now Kinross).

Chief Financial Officer Tim Thiessen has already held several CFO positions including at SnipGold (takeover by Seabridge Gold) and Aurcana Corporation. In addition, he was the controller at Endeavour Mining.

Chris Ackerman was, among other things, the Business Development Advisor with the Yukon Ministry of Economic Development.

All in all, a very experienced and successful management team that has excellent relations in the Yukon Territory as well.

Last but not least, management played a key role during the financing in 2016 and now owns more than 25% of the fully diluted shares of the company.

Summary

Metallic Minerals is a nearly unknown company however the management is not only known in the mining community but also in the investment community. Though the work on both projects is still at the beginning, especially Keno-Lightning with its past producing mines and

the already identified high grades certainly offers unparalleled potential. With CA\$2 million in cash the company is well financed to advance the exploration. The 2017 exploration campaign should lead to a couple of spectacular results, as the company is focusing on the best and potentially highest-grade areas. One of the biggest advantages is the consolidation of Keno-Lightning. The fact that in the past many private claim owners worked only on small areas of the large license area resulted in a sporadic exploration with relatively simple methods. This is now the big chance for a potentially large and especially high-grade resource which can possibly be mined by open pit methods. The neighbor Alexco has demonstrated that a mine can be successfully operated in this area. Accordingly, this provides investors in Metallic Minerals a higher potential, especially with this experienced and well networked management.

Exclusive interview with Greg Johnson, CEO of Metallic Minerals

What did you and your company achieve within the last 12 months?

The Company is essentially just over a year old as the new team was assembled to recapitalize and revitalize a dormant entity with a very compelling land package. In the last 12 months, we've completed a number of key milestones in Company and project development:

- ▶ Put together a highly-experienced, dedicated team with decades of northern experience, particularly in Yukon
- ▶ tripled our Keno Silver District land

- ▶ position to 166 square kilometers
- ▶ compiled, digitized and reviewed volumes of historic and modern data on the region from 100 years of mining history
- ▶ Assembled 2 separate properties within the Klondike Gold District and entered into two alluvial gold production royalty agreements
- ▶ Raised nearly \$2.5 million through private placement financings
- ▶ Completed inaugural field exploration season which included initial surface work (mapping, soil sampling, trenching, magnetics & VLF surveys) followed by a ~1500-meter drill program

Greg Johnson, CEO

- ▶ Completed exploration program at our secondary McKay Hill project, including surface sampling and trenching
- ▶ Brought in approximately \$500,000 in warrant exercises

What are the main catalysts for your company within the next 6 months?

We expect the market is foremost anticipating exploration results, which will be released over the coming quarter. Main catalysts are:

- ▶ Additional land acquisitions
- ▶ Potential royalties from first alluvial gold production
- ▶ Results from field program at McKay Hill Project
- ▶ Results from field program at Keno Silver Project
- ▶ Discussion of 2018 field exploration program in terms of breadth and targeting

What is your opinion about the current conditions of the silver market?

Silver appears to once again be tracking gold, which has been moving up then re-testing support and consolidating before moving up again. Most recently, gold breached the \$1300 and \$1350 marks before retracing. Silver acted in sympathy. Technicals and macro news on the horizon appear to favor higher silver prices over the coming months, but there remains a significant amount of uncertainty regarding US Federal Reserve actions in particular. We are bullish in the mid to long-term and are satisfied that the deep and sustained bear market we have been in has now reversed. Miners and especially exploration / development stage companies are still very cheap relative to where we see them in more advanced bull markets.

Sierra Metals

Three profitable Mines, continued top-class drill results en masse and a new mega-partner!

Sierra Metals is a Canadian-based commodity producer operating three mines in Mexico and Peru. All three mines are highly profitable and have a balanced production ratio of a quarter each of silver, zinc, copper and lead/gold. That alone makes Sierra Metals an absolute low cost junior producer. The company plans a production increase during the current year. Its greatest strength however is the exploration potential which seems to be almost gigantic.

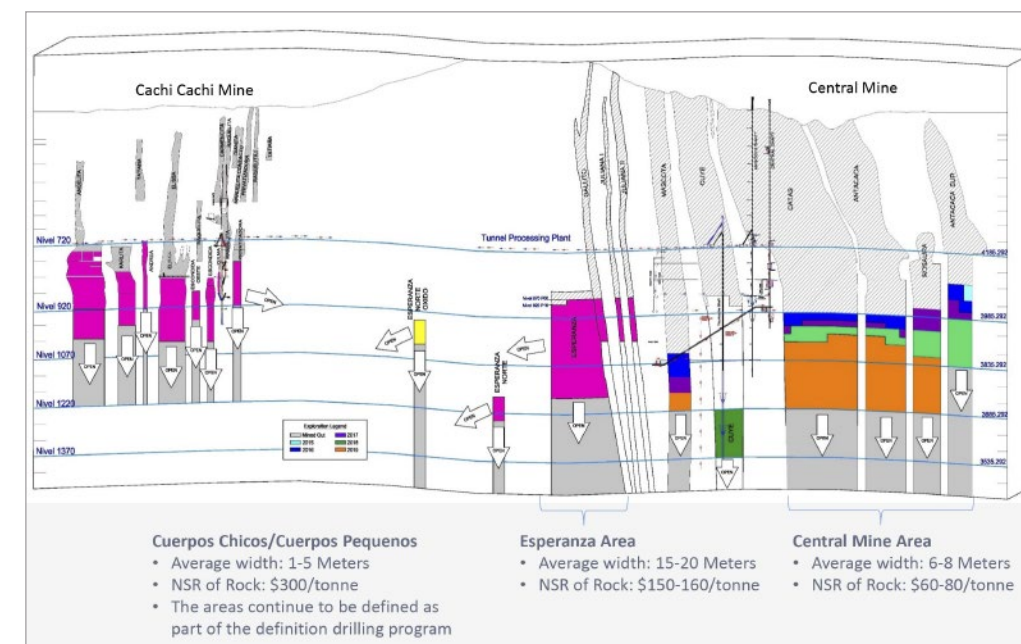

Yauricocha Mine – Location and Production

The Yauricocha Mine extends over an area of around 18,000 hectares in Peru. Sierra Metals owns that mine to 82%. Yauricocha is in continuous operation since 1948! It has several shafts, an underground ramp and a new tunnel connecting the current production areas with the processing plant. The underground mine has a processing capacity of 2,800 tons per day and produces silver, gold, lead, zinc and copper. In the

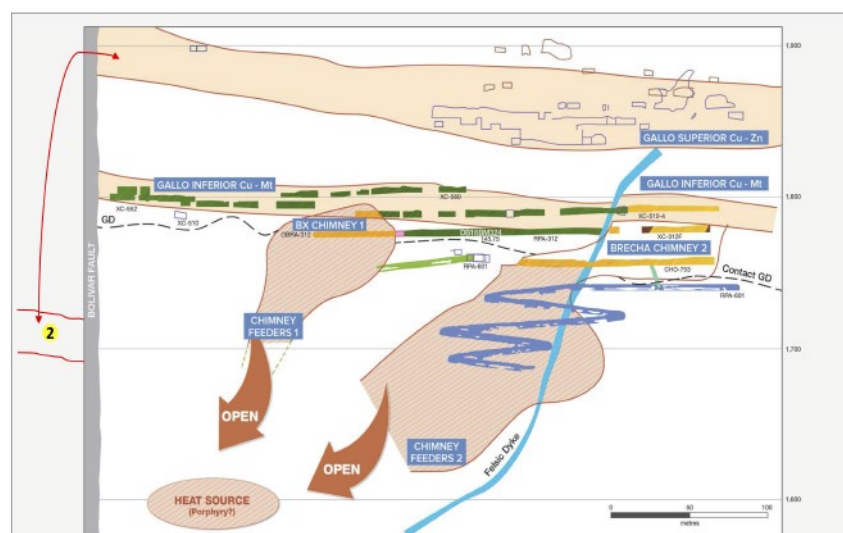

second quarter of 2017 the Yauricocha Mine produced in total 448,000 ounces of silver, 566 ounces of gold, 2.19 million pounds of copper, 8.0 million pounds of lead and 18.3 million pounds of zinc which equals around 2.08 million ounces of silver equivalent. For 2017 the company aims at all-in-sustaining costs of US\$ 12.29 per ounce of silver equivalent. As at September, the 30th 2017, Yauricocha had resources of 35.6 million ounces of silver, 618.3 million pounds of copper, 1,128 billion pounds of zinc, 337.1 million pounds of lead and 391,000 ounces of gold.

Yauricocha Mine – Exploration potential

The exploration potential at the Yauricocha mine is by far demonstrated, among other things, by the new discovery of the Cuye-Mascota extension. The biggest coup to date was the discovery of the Esperanza Zone. This zone not only has extensive high-grade areas such as 70.6m @ 61.2 grams per ton (g/t)

Yauricocha hosts several shafts, an underground ramp and a new underground tunnel, which connects the current production areas with the plant.
(Source: Sierra Metals)

Two breccia chimneys extend from the current mining area El Gallo down to depth where they seem to converge.
(Source: Sierra Metals)

silver, 0.25 g/t gold, 2.2% lead, 1.1% copper and 4.9% zinc as well as 70.0m @ 61.5 g/t silver, 0.32 g/t gold, 1.4% lead, 1.8% copper and 3.2% zinc but is also located close to the processing plant indicating future cost savings. In May 2017, the company announced the discovery of the Esperanza North Zone. Drilling in this area returned 0.5 meters of 2,050.0g/t Ag, 30% Pb; and 3.0 meters of 465.27g/t Ag, 1.99% Zn, 16.29% Pb, 5.84g/t Au as well as 2.4 meters of 985.21g/t Ag, 30% Pb and 2.40g/t Au. Esperanza North is located halfway between the Esperanza Zone and the old Cachi Cachi Mine and this area had never been drilled before. In addition, in the immediate surrounding of the current mining operations there are more than 15 areas where the company expects significant resources including a large area where the Yauricocha and Bolivar faults intersect. Sierra Metals is working aggressively to expand the Esperanza Zone in particular. The area of the main mining activities is only a small part of the total concession. La Fortuna, 2km to the southeast, is another area with copper outcropping at the surface. The past producing Kilkasca mine, 3km further to the south, hosts significant resources and is the target for future expansion strategies.

In August 2017 the 2017 drill program led to the announcement of a new discovery in the area of the Escondida Zone which is located in the Cachi-Cachi mine. The new discovery has a strike length of over 300 meters, the largest orebody historically found at Cachi-Cachi to date. In addition, drilling at depth has delineated wide extensions of skarn/polymetallic mineralization over 30 meters wide. Location of the discovery extends the foot print of the Cachi-Cachi mine to over one kilometer in the direction of Esperanza and Yauricocha's central mine zone, highlighting the exploration potential of the Yauricocha fault between Cachi-Cachi and Esperanza.

Bolivar Mine – Location and Production

The Bolivar Mine is located in the state of Chihuahua, Mexico, and covers an area of 15,217 hectares. Sierra Metals owns 100% of the mine. The underground mine has a processing capacity of 3,000 tons per day and produces silver, gold and copper. In the second quarter of 2017 the Bolivar Mine produced in total 73,000 ounces of silver, 620 ounces of gold and 3.1 million pounds of copper which equals to around 4.1 million pounds of copper equivalent. For 2017 the company aims at all-in-sustaining costs of US\$ 1.74 per pound of copper equivalent. As of September 30, 2016, Bolivar had reserves of 112.1 million pounds of copper equivalent and resources of 492.7 million pounds of copper equivalent.

Bolivar Mine – Exploration potential

Two breccia chimneys extend from the current mining area El Gallo down to depth where they seem to converge. The company expects the source of the copper mineralization at the intersection of the two chimneys, which could be a

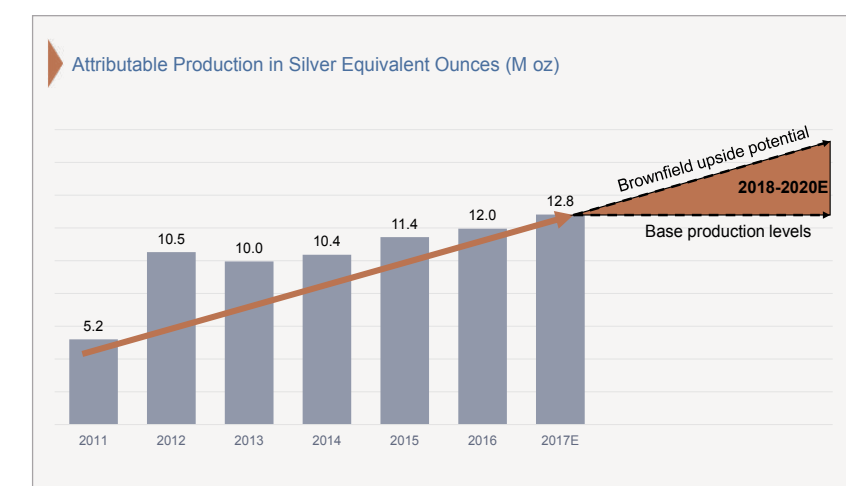

high-grade porphyry copper deposit. In addition, the concession area has 10 areas that could host significant resources including the La Sidra and Bolivar West Zones, where Sierra Metals defined areas with high grade copper mineralization in March 2017. A 20,000-metre drill program at La Sidra provided excellent results including 3.5 m @ 9.22% copper equivalent and 9.7m @ 10.63% copper equivalent. Results of the drilling activities at Bolivar West Zone included 9.2m @ 4.05% copper equivalent and 10.5m @ 4.26% copper equivalent. In September 2017 Sierra Metals announced the assay results of the completed definition drill program in the West Bolivar Zone. This Zone is located adjacent to the current operations at the Bolivar Mine. The drill program delivered very good copper, zinc and silver grades. The average grade was 2.55% copper equivalent at an average true width of 9.1 meters, which is significantly above Bolivar's current resource grade and current head grades. This showed that Bolivar West still has further potential resource growth prospects and remains open to the northeast. These detailed drill results will provide the Company with new data to update the current resources at the Bolivar mine. This resource update will be completed by the fourth quarter of 2017.

Bolivar Mine - Memorandum of Understanding

In September 2017 Sierra Metals signed a Memorandum of Understanding with Jinchuan Group Co Ltd. for the development of their Bahuerachi copper project. Bahuerachi is adjacent to Sierra's Bolivar concessions. The Jinchuan Group is one of the largest base metal producers in the world and the largest copper producer in northern China. With the cooperation the two companies expect synergy effects for both projects.

Cusi Mine – Location and Production

The Cusi Mine is located in the state of Chihuahua, Mexico as well and covers an area of 11.671 hectares. Sierra Metals owns 100% of the mine. The underground mine has a processing capacity of 600 tons per day and produces silver, gold, lead and zinc. In the second quarter of 2017 the Cusi Mine produced in total 95,000 ounces of silver, 126 ounces of gold, 457,000 pounds of lead and 262,000 pounds of zinc which equals to around 138,000 ounces of silver equivalent. For 2017 the company aims at all-in-sustaining costs of US\$ 19.66 per ounce of silver equivalent. As of January 31, 2017, Cusi had resources of 31.8 million ounces of silver equivalent.

The company plans to further expand production. (Source: Sierra Metals)

Cusi Mine – Exploration potential

In February 2017 Sierra Metals announced the discovery of a new high-grade silver intercept in the Santa Rosa de Lima complex within the current Cusi Mine operational area. The discovery included 1.5m @ 1,243 g/t silver equivalent and 3.1m @ 1,126 g/t silver equivalent. The Santa Rosa de Lima complex lies within a regional structure extending some

64km. Extension on the Cusi property has an anticipated length of 12km. The discovery comes as part of a reinterpretation of the hydrothermal model and a drilling campaign consisting of 15,000m which began in December 2016. The mineralization at the Santa Rosa de Lima structure is located only 100m below the surface, and can occasionally be observed at surface at the intersections of veins like "Promontorio" and "Santa Edwiges".

In June 2017, the company announced additional results from a new high-grade zone. According to the results the zone extends over 1,000 meters in length and 400 meters in depth. The average grade is 371 g/t of equivalent silver and the average true width of the mineralized intercepts is 4.1m. The peak values were 1,152 g/t Ag, 2.12% Pb and 2.00% Zn. In August 2017 the company announced the results of the extended drill program that was carried out in the Santa Rosa de Lima Zone within the Cusi mine. The average grade of the infill drill intersections was 343 gpt silver equivalent with a peak value of 580 gpt silver equivalent. This is truly an exceptional development for the Cusi Mine and has the ability to transform current operations. There is a possibility to add significant tonnage and ounces with much higher grades and no-

tably increased widths into the future production.

Trading start at NYSE MKT

In July 2017 Sierra Metals achieved the listing on the NYSE MKT under the trading symbol "SMTS". Sooner or later this will lead to higher trading volumes because the stock will be exposed to a wider investor community.

Summary

In 2016 Sierra Metals reported new record production results at the flagship project Yauricocha on a monthly basis. Despite this heavy production increase the company plans a further production increase in 2017. The discovery of the Esperanza Zone at Yauricocha is not only proof that Sierra Metals has a tremendous exploration potential but also due to the proximity of that area to the existing processing plant (which is closer than the actual production area) the company will achieve improved production results. It's the same for the new discovery Esperanza North. The construction of the tunnel through which the mined ore is directly transported to the mill has a gradual positive effect. The increasing production, the rising silver and base metal prices as well as decreasing production costs should soon result in earnings for Sierra Metals. A prerequisite is the expansion of the relative small and not very profitable Cusi Mine currently in the development phase to a profitable project. Sierra Metals' big advantage is certainly the exploration potential in all three project areas which should provide a constant positive news flow during 2017. Last, but not least the new relationship with the new mega-partner Jinchuan Group should bring a lot of speculation potential into the stock.

Exclusive interview with Igor Gonzales, CEO of Sierra Metals

What did you and your company achieve within the last 12 months?

Sierra Metals optimized its existing mines, this included sending higher value material to its mills, replacing aged equipment to improve productivity, improving metallurgical recoveries and completing 83,000 meters of exploration drilling.

What are the main catalysts for your company within the next 6 months?

The Company will release technical reports at all 3 mines which are expected to increase Mineral reserves and resources. This will trigger prefeasibility stu-

dies to examine expansions of all three mines.

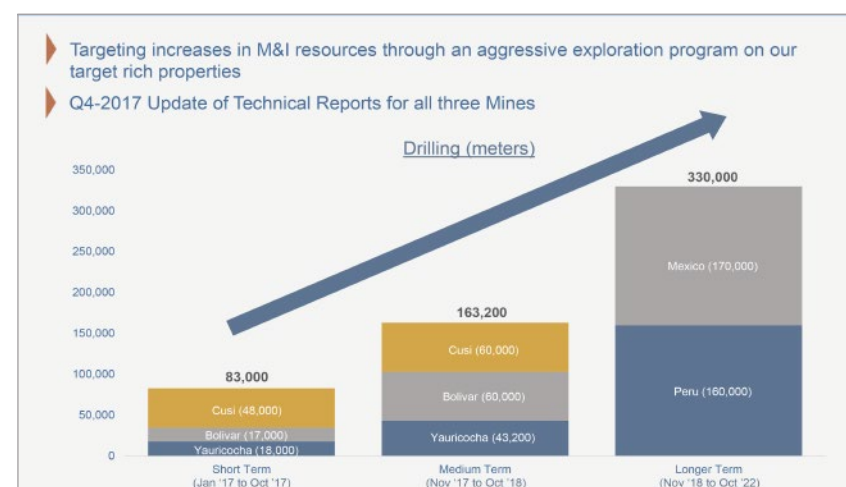

What is your opinion about the current conditions of the silver market?

Tracking gold as a leading precious metals indicator we expect silver prices to be challenged in the latter part of 2017. However unlike gold silver still has industrial demand so we do expect it to be less volatile than gold.

Igor Gonzales, CEO

Sierra Metals plans aggressive drill campaigns (Source: Sierra Metals)

Sierra Metals Inc.

(Source: BigCharts)

Silvercorp Metals

Largest primary silver producer in China with negative cash costs!

Rui Feng, CEO

Silvercorp Metals is a Canadian silver producer operating exclusively in China, where its 8 mines produced over 50 million ounces of silver and 750 million pounds of lead and zinc during the past 10 years. Currently, the company has reserves of over 100 million ounces of silver and resources (including reserves) of over 150 million ounces of silver. The licence areas covering more than 70,000 hectares provide additional resource potential. Silvercorp reported a net income of US\$10.9 million in Q1/2018 (as of June 30th, 2017) and increase its cash position to over US\$102.1 million (including short term investments). This was possible due to the low cash costs, which were a negative(!) US\$ 3.57 per ounce of silver (including all by-products) in 2017. Silvercorp pays regular dividends.

Ying Mining District: Location and Resource

Six of the seven operating mines are located in the Ying Mining District in the Chinese Province of Henan. They all lie inside a radius of only 6km covering a license area of more than 70km² and

feed two processing plants with a total capacity of 3,200 tons per day (tpd). The concentrates are sold primarily to six smelters within a radius of 200km. The interesting thing is, the smelters pay up front for Silvercorp's concentrates – a novelty in the silver sector!

A resource estimate in February 2017 specifies reserves of 95.02 million ounces of silver, 27,270 ounces of gold, 460,960 tons of lead and 155,690 tons of zinc in Silvercorp's mines located in the Ying District. In comparison with the last estimate in 2014 the company has improved its reserve base by 15% for silver, 21% for lead and 22% for zinc in spite the fact that 14.5 million ounces of silver were produced in the meantime. The resources (including reserves) are around 128.3 million ounces of silver, 47,000 ounces of gold, 630,600 tons of lead and 214,350 tons of zinc. The inferred resources of more than 77 million ounces of silver, 39,000 ounces of gold, 409,000 tons of lead and 115,000 tons of zinc are not included in the estimate. The huge increase in reserves was made possible by an extensive exploration program. Between 2013 and 2016 the company completed drill programs totaling over 225,000m and constructed tunnels totaling 128,000m. With this almost 200 veins were identified of which the majority are not yet defined. The company estimates that it can operate the mines with the current reserves until 2036 whereby more than enough potential for the reserve and consequently for the production expansion exists.

The Ying Mine, also known as SGX Mine, and the associated satellite mine HZG were acquired in 2004 and are located in the western part of the Ying District. Silvercorp owns 77.5% of the mines. The high-grade part of the ore is separated and sold directly to the smelters. The low-grade part is transported to the processing plant, 15km away, where a silver-lead and zinc concentrate is produced.

Ying Mine (SGX)

The HPG Mine is located east of the SGX Mine and was acquired in January 2007. Silvercorp owns 80% of the mine. The mined ore is transported to the central processing plant a distance of 15km away. The concentrates are sold to Chinese smelters mostly located within a 160km radius.

HPG Mine

The TLP Mine is located in the eastern part of the Ying Mining District around 11km southeast of the SGX Mine. The mine was acquired in December 2007 and Silvercorp owns 77.5%. Like in the other Ying mines, a contractor is also responsible for the mining activities in the TLP Mine. The concentrates are delivered to local smelters.

TLP Mine

The LM Mine, comprised of the LME (East) and LMW (West) mines, was acquired in November 2007 and is located 3km south of the TLP Mine and 12km from the SGX Mine.

LM Mine(s)

The LM Mine, comprised of the LME (East) and LMW (West) mines, was acquired in November 2007 and is located 3km south of the TLP Mine and 12km from the SGX Mine.

Ying Mining District: Production

During Q1/2018 Silvercorp sold 1.324 million ounces of silver. In addition, Silvercorp sold 14.5 million pounds of lead and zinc during these 3 months. The cash costs were minus US\$2.97 and the all-in-costs were US\$3.66 per ounce of silver. To compare: In Q1/2017, the all-in-costs were US\$5.80.

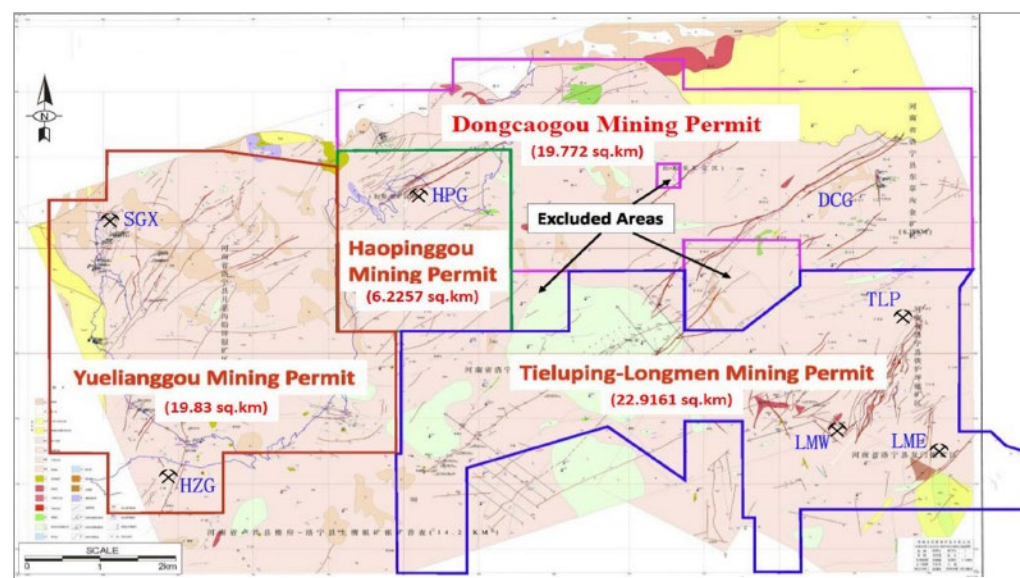

Ying Mining District: recent exploration successes!

In August 2017 Silvercorp reported in the course of the 2017 drill program high grade mineralization in the area of the SGX mine. Among other things the drills intersected 4.48m with an average of 1,050 gpt silver and 15.92% lead. In addition, in the area of the LME and TLP mines the mineralized structures could be extended by means of drilling and tunneling. In the area of the HZG, HPG and LMW mines new high-grade vein structures were identified including 1.21m with an average of 1,389 gpt silver plus lead, zinc and copper.

GC Mine: Location and Resource

Silvercorp's seventh operating mine, the GC Mine, is located in Guangdong Province. This is a silver-zinc mine which commenced operations in August 2014.

Integrated mining and exploration permits in the Ying Property
(Source: SilverCorp Metals)

In April 2008 Silvercorp received a first exploration permit and owns 95% of GC and of the nearby Shimentou Project. GC has a 1,600tpd processing plant and the last resource estimate in 2012 outlined a total resource of 61.5 million ounces of silver, 213,000 tons lead and 447,000 tons zinc. The reserves amounted to close to 18.5 million ounces of silver, 62,000 tons lead and 140,000 tons zinc.

GC Mine: Production

The GC Mine produced 0.189 million ounces of silver during Q1/2018. In addition, the mine produced 6.4 million pounds of lead and zinc during these 3 months. The cash costs were minus US\$7.80 and the all-in-costs were minus US\$2.48 per ounce of silver. To compare: In Q1/2017, the all-in-costs were plus US\$4.76.

BYP Mine

The BYP Mine is located in Hunan Province and was acquired in 2011. The mine has a 500 tpd processing plant and

was operational until 2014. Since that time the mine is under care and maintenance. Because BYP is not a core asset, the company is working on strategic options for the sale or an optioning out of the project. In doing so a resuming of production seems also possible. At the end of 2011 the BYP Mine had resources of 438,000 ounces of gold, 149,000 tons lead and 392,000 tons zinc.

Strong margin

Silvercorp Metals reported very positive financial and operating results in Q1/2018 ending June 30th, 2017. In comparison with Q1/2017 the net income increased by 134% to US\$10.9 million in Q1/2018. In addition, the company reported cash costs of negative US\$3.57 per ounce of silver and all-in sustaining cash costs of US\$4.70 per ounce of silver in Q1/2018. This results in a gross margin of 50% for the third quarter by far the highest in the peer group.

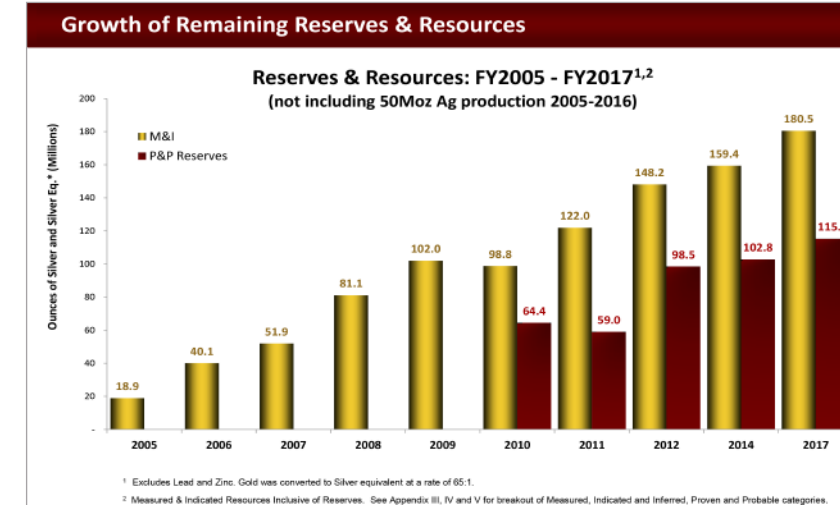

Planned expansion into Middle and South America

As announced at the PDAC 2017 the company is looking for high grade projects outside of China which can be brought to production relatively fast. Middle and South America are in the focus.

Summary

Silvercorp Metals pulverized its own forecasts for fiscal 2017 and achieved the forecasts for the whole year already in the third quarter! The company achieved these results in spite of the fact that only two thirds of the available processing capacity in the Ying District was used. A further production increase and more ef-

ficient use of the plant there could reduce the processing costs further. This would be achieved from the perspective that the company already reports negative costs per produced ounce of silver, meaning all costs are already covered by the production of the by-products lead and zinc and an additional income of US\$3.57 per ounce of silver is posted. This is almost a unique case which makes Silvercorp the lowest cost silver producer worldwide. In addition, the company has an equally high additional exploration and resource potential within its license areas impressively demonstrated by the recent reserve and resource estimate and the drill results. All in all, Silvercorp should see a strong upward development not only at the production but also at the resource base. It is interesting that Silvercorp bought back over 4 million of its own shares in 2016 and reduced the number of the outstanding shares by around 3%. The unofficial announcement came as a little surprise in

Despite large production numbers, the company was able to expand its reserve- and resource-base.

(Source: SilverCorp Metals)

March 2017 that the company is looking for suitable projects in Middle and South America although some geographic diversification would not be a bad thing. Attention should be paid to the semi-annual dividend of CA\$ 0.01.

Silvercorp has by far the highest gross margin in its peer-group

Silver One Resources

On track to become one of the leading silver producers

Silver One Resources is a young Canadian development company with close ties to Keith Neumeyer who already made First Quantum, First Majestic Silver and First Mining Finance a success story and privately invested in Silver One in 2016. Silver One has three silver projects in Mexico which were acquired from First Mining Finance in September 2016. Three of the projects have historic Resources and are past producers. The projects contain around 20 million ounces of silver. In the middle of January 2017, the company signed an option agreement with Silver Standard Resources for the past producing Candelaria Mine including a historic resource of more than 130 million ounces of silver equivalent.

Neumeyer's achievements are legendary!

Neumeyer's achievements are already legendary. He advanced First Quantum Minerals from the ground up to a market cap of several billion US\$. First Quantum Minerals' share price peaked at almost US\$ 30. Considering an initial quotation of US\$ 0.50 this is a huge price gain. His second project First Majestic Silver is no less known. It is one of the largest silver

producers worldwide with an actual market cap of US\$ 2 billion. The issue price of First Majestic Silver's shares was once CA\$ 0.16 and peaked at CA\$ 24 in 2016. Neumeyer's third creation is First Mining Finance, a holding company specializing in commodity projects by acquiring high-value assets in North America. This company was launched one and a half years ago and profits already peaked at 200%.

Neumeyer's newest project: Silver One Resources!

Neumeyer's newest project is Silver One Resources. The goal is to become one of the leading silver exploration and development companies in Mexico. Neumeyer would not be satisfied with less than that. In the end he is accustomed to success and ambitious like no other. Although he doesn't have an official function at Silver One Resources due to the private investment he could have an increased interest in an equally big success as with other companies he actively manages.

First Acquisition(s)

In 2016 Silver One Resources acquired from the "affiliated company" First Mining Finance three potential top-class mining projects. Therefore, First Mining Finance sold its 100% interest in the concession areas Peñasco Quemado, La Frazada and Pluton for a total of six million shares of Silver One Resources. After completion of the transaction First Mining owns 7.2% of the issued and outstanding shares of Silver One Resources and has a 2.5% net smelter royalty on each of the concession areas whereby Silver One Resources can buy back 1.5% of the royalty for US\$ 1 million.

Therefore, Neumeyer kills two birds with one stone. First, he provides his newest creation Silver One Resources with three

underexplored but potential top-class silver projects in Mexico. Second, he puts into practice the mineral bank business model of First Mining Finance with this transaction. In other words, the monetization of First Mining Finance's projects by signing of agreements with third parties that advances these projects while First Mining keeps an interest in the concession areas.

Concession # 1: Peñasco Quemado (Sonora, Mexico)

Peñasco Quemado is located in the north of the Mexican state Sonora, 60 km south of the town of Sasabe and comprises 3,746 hectares. A 2006 drilling program outlined a historical measured and indicated resource of 2.57 million tons at a grade of 117 g/t Ag for a silver resource of 9.63 million ounces. The silver mineralization is part of two identified prospecting areas. This first area has current dimensions of 3,000m x 300m and contains besides silver significant traces of lead (up to 800 ppm), zinc (up to 3,500 ppm), barium and manganese. Originally this first zone was only 450m long but was expanded to 3,000m in March 2017. The second anomaly covering an area of 2,000m x 1,500m has not been explored or drilled to date.

Concession # 2: La Frazada (Nayarit, Mexico)

La Frazada is located approximately 300 km northwest of Guadalajara and covers an area of 299.10 hectares that hosts silver rich epithermal veins with base metals. In 2008, a historical measured and indicated resource was calculated totaling 583,000 tons at 250 gpt silver, 0.87% lead, and 2.44% zinc; historical inferred resources are an additional 534,000 tons at 225 gpt silver, 0.92% lead, and 2.62% zinc.

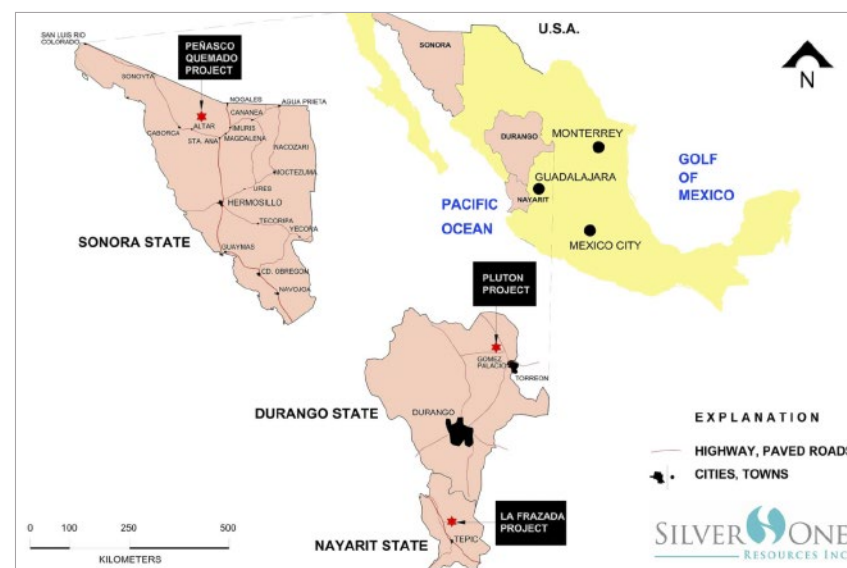

Concession # 3: Pluton (Durango, Mexico)

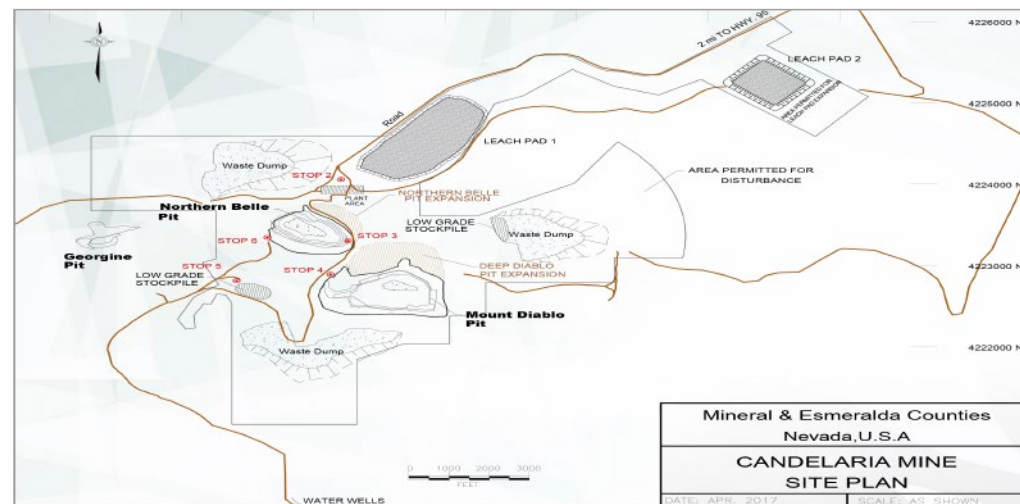

Pluton is a 6,534-hectare concession comprised of 3 contiguous exploration concessions. It is strategically located within the historic Ojuela-Mapimi Mining District and lies along the eastern front of the Sierra Madre Oriental in northern Durango adjacent to Excellon's active Platosa silver mine. The exploration targets at Pluton are silver-lead-zinc-carbonate replacement deposits under alluvial overburden.

Company maker deal Candelaria

The Silver One management made the biggest deal to date in January 2017. The company closed an option agreement with Silver Standard Resources to acquire a 100% interest in the past producing Candelaria Mine located in Nevada. The Candelaria Mine produced from 1864 until its closure over 68 million ounces of silver in total. For only US\$ 4 million in Silver One shares (payable over a period of four years) the company will get 130 million ounces of silver equivalent in total (historic resource estimation). In addition, the property is subject to a 3% net smelter returns royalty payable to Teck Resources USA plus a minimal charge for waste rock dumped on certain claims. Silver One's goal is now to re-evaluate the majority of the historic resources and continue Silver Standard's drilling activities to further delineate the still open resources at depth. Proof for the tremendous resource potential is one of the recent drill holes which contained 670 gpt silver over 13.7m. In addition, approximately 48 million ounces of the 130 million ounces lay within the existing heap leach pads i.e. directly at the surface. The company is investigating to what extent this occurrence can be dug up and processed in a future plant. The historically known 44 g/t silver

Silver One has three silver projects in Mexico which were acquired from First Mining Finance in September 2016. (Source: SilverOne)

Candelaria Mine Plan
(Source: SilverOne)

in these leach pads is about double the grade as in other mines in Nevada. Silver One has started the permitting process for mining these occurrences in August 2017. From mid-2018 on, the company wants to initiate a (pre-)feasibility study. The completion of these studies including feasibility studies is expected at the end of 2018 and with positive results could lead to a positive production decision.

First financing oversubscribed – price raised!

The unusual course of the first financing shows that investors are convinced by Silver One Resources. Originally the company wanted to raise CA\$ 2.5 million by issuing 12.5 million shares at CA\$ 0.20. The interest in the new shares was high and the share price started to climb fast, so the company decided to increase the issuing price to CA\$ 0.25. You don't see that every day a company increasing the price. Normally it is the opposite. But that's not all. Instead of issuing the original amount of 12.5 million shares the company decided to reduce the number of shares. The company issued 10 million shares to raise the originally targeted CA\$ 2.5 million. But why wasn't that financing opportunity used to raise as

much money as possible? Silver One Resources gave the market a very strong signal that they don't want to dilute the price but keep the numbers of shares low. This is a strong vote of confidence which will attract other investors and in turn will increase the price of Silver One Resources' shares.

Excellent management!

Silver One not only has top assets but a top-class management as well! With Luke Norman and Greg Crowe two real mining stars are in the management team. Luke Norman is the former CEO of Entrée Gold and was mainly responsible for the joint venture with Rio Tinto regarding the mega project Oyu Tolgoi in Mongolia. Greg Crowe was among other things a founding member of Gold Standard Ventures a development company which will invest over US\$ 15 million in the exploration of its extensive licenses in Nevada in 2017.

Summary

All three concessions acquired from First Mining Finance from Silvermex Resources during the Silvermex acquisition

were later integrated in First Mining Finance. Because some of them already have resource estimations Silver One Resources has a certain value right from the beginning. That the first projects are not always the driving force of a company is demonstrated by the acquisition of the past producing Candelaria Mine. This is no doubt a genius idea of the management. It is clear: Silver One Resources should become a similar success story like the three previous projects of Neumeyer. Accordingly, there were huge expectations in Silver One Resources and at the same time a tremendous leap of faith in the group around Neumeyer. This

is all happening at the background that we seem to be in another silver bull market similar to the situation First Majestic was in 2002. How high First Majestic rose is well known. Silver One could have secured its first future mine with the Candelaria deal. With the Neumeyer group in the back the financing of a mining operation shouldn't be a big problem. The most important catalyst is now the sampling of the heap leach pads at Candelaria, because this could lead to an initial production. The company did a financing in September 2017 and is therefore very well financed.

Exclusive interview with Gregory Crowe, CEO of Silver One

What did you and your company achieve within the last 12 months?

After listing the company in August 2016:

- ▶ Negotiated 3 Mexican silver properties from First Mining Finance for 6 million shares, making First Mining our largest shareholder at 7.2% of our Issued and Outstanding shares.
- ▶ Advanced the Peñasco Quemado project in Sonora State, Mexico. Completed a property wide soil survey and discovered a 3+ km, zinc and lead soil anomaly along strike from the 10 million oz silver Historical Resource area. This suggests geological similarities to the Taylor – Central - Hermosa deposits being developed by Arizona Mining, located approximately 100km to the North East of Peñasco Quemado. Arizona Mining has outlined substantial zinc, lead, silver resources and has built itself into a +\$900 million market cap company.

- ▶ Completed the 3-year option agreement with Silver Standard on the past producing Candelaria silver project in Nevada. Silver One can acquire 100% of Silver Standard's interest by issuing US \$ 4.0 million in Silver One shares to Silver Standard over the next 3 years. Candelaria has 3 excellent opportunities:
- ▶ Potential re-processing of the Historic heap leach pads which host a Historical Resource of + 48 million ounces of silver at 1.29g/t (~40g/t Ag).
- ▶ High grade potential from an area outlined by Silver Standard drilling in which they delineated Historical Resources of +44 million ounces of silver at the measured and indicated level, plus over 34 million ounces inferred. One intercept returned over 13.7m of 670g/t Ag.
- ▶ Along strike potential to increase the Historical Resource as indicated by numerous old showings and workings along strike in both directions.

Gregory Crowe, CEO

What are the main catalysts for your company within the next 6 months?

To proceed with potential development of Candelaria.

- ▶ Currently permitting the drilling of the old leach pads in order to determine distribution, grades and potential recoveries of Ag.
- ▶ With positive results will proceed with Pre-feasibility study / Feasibility study to examine potential near term silver production from re-processing the old heaps.
- ▶ Conduct surface exploration and sampling and potential geophysical surveys in order to outline drill targets to test the high-grade targets and potential of increasing the resources.

At PQ continue with geological mapping and geophysical surveys to delineate drill targets.

What is your opinion about the current conditions of the silver market?

The current silver market remains soft. As silver prices are tied to the US\$, the perceived health of the dollar works against silver and gold. Other factors that contribute to the price of silver include the health of the global stock markets, supply/demand, inflationary pressures and price manipulation. Silver generally maintains a varying gold-silver ratio. Over the past century it has averaged 40-50:1 and as recently as 2011 dipped to 35:1. It currently hovers in the 75-80:1 range. This in spite of the fact that the world production of silver is only 10 times that of gold. A return to average ratios would boost silver prices in relation to gold. In a bull market, silver generally performs better than gold.
